Cleaning Up the Nation's Waste Sites ,2004

The New Eastern Europe Daniel Sheldon Hamilton,Gerhard Mangott,2007 The nations of Ukraine, Moldova and Belarus are the new Eastern Europe - sandwiched between a larger EU and a resurgent Russia. Historically the object of volatile geopolitical shifts, none has ever existed as a state within its current borders, and none enjoys consensus on its respective national identity. All are located along key military, transportation and energy corridors linking Europe to Eurasia. Their problems-infectious diseases, organized crime, drug and human trafficking, pollution and illegal migration-directly spill over into the EU. Their success could benefit democracy, pluralism and the rule of law throughout the post-Soviet space. Their future will help shape Russia's own destiny and ultimately determine where Europe ends.

Lexicon of Jewish Names in Late Antiquity: The Eastern Diaspora 330 BCE-650 CE Tal Ilan,2002 In this lexicon Tal Ilan collects all the information on names of Jews in Palestine and the people who bore them between 330 BCE, a date which marks the Hellenistic conquest of Palestine, and 200 CE, the date usually assigned to the close of the mishnaic period, and the early Roman Empire. Thereby she includes names from literary sources as well as those found in epigraphic and papyrological documents. Tal Ilan discusses the provenance of the names and explains them etymologically, given the many possible sources of influence for the names at that time. In addition she shows the division between the use of biblical names and the use of Greek and other foreign names. She analyzes the identity of the persons and the choice of name and points out the most popular names at the time. The lexicon is accompanied by a lengthy and comprehensive introduction that scrutinizes the main trends in name giving current at the time. --Book Jacket.

Net-Positive Design and Sustainable Urban Development Janis Birkeland,2020-02-21 'Sustainable' urban planning, policy and design professes to solve sustainability problems, but often depletes and degrades ever more resources and ecosystems and concentrates wealth and concretize social disparities. Positive Development theory holds that development could create more net ecological and social gains than no construction at all. It explains how existing conceptual, physical and institutional structures are inherently biased against the preservation and expansion of social and natural life-support systems, and proposes explicit reforms to planning, design and decision making that would enable development to increase future options and social and natural life-support systems - in absolute terms. Net-Positive Design and Sustainable Urban Development is aimed at students, academics, professionals and sustainability advocates who wonder why existing approaches have been ineffective. It explains how to reform the anti-ecological biases in our current frameworks of environmental governance, planning, decision making and design - and suggests how to make these changes. Cities can increase both the 'public estate' (reduce social stratification, inequity and other causes of

conflict, increase environmental quality, wellbeing and access to basic needs, etc.); and the 'ecological base' (sequester more carbon and produce more energy than used during construction and operation, increase ecological space to support ecological carrying capacity, ecosystem functions and services, restore the bioregions and wilderness, etc.). No small task, this new book provides academic theory and professional tools for saving the planet, including a free computer app for net-positive design.

Miombo Woodlands in a Changing Environment: Securing the Resilience and Sustainability of People and Woodlands Natasha S. Ribeiro,Yemi Katerere,Paxie W. Chirwa,Isla M. Grundy,2021-09-18 Based on work by the Miombo Network in southern Africa, this book helps decision-makers and general readers alike improve their understanding of the socio-ecology of the Miombo woodlands across southern Africa. It also highlights the importance of and the need for further research on the unique Miombo ecology and its link with economic development. One major challenge facing these woodlands is the influence that direct (both natural and anthropogenic) and indirect drivers of change, as well as interactions between these, have had over the centuries. As such the book explores the socio-economic and ecological interactions that occur in these woodlands and discusses the need for further research to provide a better understanding of these interactions. Drawing on data and information from numerous studies conducted in the last 20 years, the book presents a comparative analysis of policy changes and management experiences in the countries concerned. It also addresses issues of global climate change, since they have an impact on Miombo ecosystem management and restoration, and provides future projections based on an assessment of how climate change has affected the Miombo woodlands in the past.
