### **Graphics Recognition. Algorithms and Applications**

Dorothea Blostein, Young-Bin Kwon, 2014-10-08 This book presents refereed and revised papers presented at GREC 2001, the 4th IAPR International Workshop on Graphics Recognition, which took place in Kingston, Ontario, Canada in September 2001. Graphics recognition is a branch of document image analysis that focuses on the recognition of two-dimensional notations such as engineering drawings, maps, mathematical notation, music notation, tables, and chemical structure diagrams. Due to the growing demand for both off-line and on-line document recognition systems, the field of graphics recognition has an exciting and promising future. The GREC workshops provide an opportunity for researchers at all levels of experience to share insights into graphics recognition methods. The workshops enjoy strong participation from researchers in both industry and academia. They are sponsored by IAPR TC-10, the Technical Committee on Graphics Recognition within the International Association for Pattern Recognition. Edited volumes from the previous three workshops in this series are available as Lecture Notes in Computer Science, Vols. 1072, 1389, and 1941. After the

GREC 2001 workshop, authors were invited to submit enhanced versions of their papers for review. Every paper was evaluated by three reviewers. We are grateful to both authors and reviewers for their careful work during this review process. Many of the papers that appear in this volume were thoroughly revised and improved, in response to reviewers' suggestions.

The book discusses a wide variety of industrial, engineering and scientific applications of the emerging techniques and offers a platform for researchers from academia and industry to present their original work and exchange ideas, information, techniques and applications in the field of computer science.

**New Jersey Cemeteries and Tombstones** Richard Veit, Mark Nonestied, 2008-09-17 From the earliest memorials used by Native Americans to the elaborate structures of the present day, Richard Veit and Mark Nonestied use grave markers to take an off-beat look at New Jersey's history that is both fascinating and unique. *New Jersey Cemeteries and Tombstones* presents a culturally diverse account of New Jersey's historic burial places from High Point to Cape May and from the banks of the Delaware to the ocean-washed Shore, to explain what cemeteries tell us about people and the communities in which they lived. The evidence ranges from somber seventeenth-century decorations such as hourglasses and skulls that denoted the brevity of colonial life, to modern times where memorials, such as a life-size granite Mercedes Benz, reflect the materialism of the new millennium. Also considered are contemporary novelties such as pet cemeteries and what they reveal about today's culture. To tell their story the authors visited more than 1,000 burial grounds and

interviewed numerous monument dealers and cemetarians. This richly illustrated book is essential reading for history buffs and indeed anyone who has ever wandered inquisitively through their local cemeteries.

Dependable Computer Systems Wojciech Zamojski, Janusz Kacprzyk, Jacek Mazurkiewicz, Jarosław Sugier, Tomasz Walkowiak, 2011-05-13 Dependability analysis is the recent approach to performance evaluation of contemporary systems which tries to cope with new challenges that are brought with their unprecedented complexity, size and diversity. Especially in case of computer systems and networks such evaluation must be based on multidisciplinary approach to theory, technology, and maintenance of systems which operate in real (and very often unfriendly) environments. As opposed to “classic” reliability which focuses mainly on technical aspects of system functioning, dependability studies investigate the systems as multifaceted and sophisticated amalgamations of technical, information and also human resources. This monograph presents selected new developments in such areas of dependability research as mathematical models, evaluation of software, probabilistic assessment, methodologies, tools, and technologies. Intelligent and soft computing methods help to resolve fundamental problems of dependability analysis which are caused by the fact that in contemporary computer systems it is often difficult to find a relation between system elements and system events (the relation between reasons and results) and it is even more difficult to define strict mathematical models with “analytical” relationships between such phenomena.

Innovative Wastewater Treatment Technologies - The Innoqua Project Costel Bumbac, Jean-Baptiste Dussaussois, Alexandre Schaal, David Tompkins, 2021-08-31 Globally, poor hygiene and sanitation contribute to more than 1,000 daily deaths from diarrhoeal diseases among children under the age of 5, while two thirds of urban wastewaters are discharged without treatment into

lakes, rivers and coastal waters. Across Europe the percentage of the population connected to wastewater treatment plants varies from 14% to >99% with many reliant on unsuitable decentralised sanitation systems or no wastewater treatment at all. With less than a decade left to achieve the 2030 sanitation targets as set out in the Sustainable Development Goals, there is an urgent need to develop new treatment solutions that can be rapidly deployed to meet the needs of growing urban and peri-urban populations, together with under-served rural communities. This book discusses decentralised wastewater treatment and the role of nature-based solutions within the context of the twenty-partner international INNOQUA project. INNOQUA set out to develop and demonstrate a suite of modular, low cost, decentralised solutions that use the combined capabilities of earthworms, bacteria, Cladocera and micro-algae to deliver nature-based primary, secondary and tertiary treatment - followed by UV disinfection. Design and operation principles are outlined, together with performance data and practical feedback from pilot and demonstration facilities situated in eleven countries from Ecuador to Scotland and India. Barriers and drivers towards more widespread uptake of these technologies are also examined, alongside an exploration of existing markets for nature-based sanitation in the Global South.

*Theory and Applications of Dependable Computer Systems*  
Wojciech Zamojski, Jacek Mazurkiewicz, Jarosław Sugier, Tomasz Walkowiak, Janusz Kacprzyk, 2020-05-21 This book presents selected papers from the Fifteenth International Conference on Dependability of Computer Systems (DepCoS-RELCOMEX), which illustrate the diversity of theoretical problems in analysis of performability, reliability and security of contemporary computer systems. Covering also methodologies and practical tools involved in this field, it is a valuable reference resource for scientists, researchers, practitioners and students who are dealing with these subjects. Established in 2006, DepCoS-RELCOMEX is an annual conference series organised by Wrocław University of Science and

Technology. It focuses on the dependability and performability of contemporary computer systems – topics that can provide solutions to new challenges in evaluation of their reliability and efficiency. Since they are probably the most complex technical systems ever engineered by humans, the organization of modern computer systems cannot be modelled and analysed solely as structures (however complex and distributed) built only on the basis of technical resources. Instead they should be considered as a unique blend of interacting people (their needs and behaviours), networks (together with mobile properties, iCloud organisation, Internet of Everything) and a large number of users dispersed geographically and producing an unimaginable number of applications. This new, interdisciplinary approach is developing a continually increasing range of methods which apply also the latest findings in artificial intelligence (AI) and computational intelligence (CI).

*Data Mining and Predictive Analytics* Daniel T.

Larose, 2015-02-19 Learn methods of data analysis and their application to real-world data sets This updated second edition serves as an introduction to data mining methods and models, including association rules, clustering, neural networks, logistic regression, and multivariate analysis. The authors apply a unified “white box” approach to data mining methods and models. This approach is designed to walk readers through the operations and nuances of the various methods, using small data sets, so readers can gain an insight into the inner workings of the method under review. Chapters provide readers with hands-on analysis problems, representing an opportunity for readers to apply their newly-acquired data mining expertise to solving real problems using large, real-world data sets. *Data Mining and Predictive Analytics*: Offers comprehensive coverage of association rules, clustering, neural networks, logistic regression, multivariate analysis, and R statistical programming language Features over 750 chapter exercises, allowing readers to assess their

understanding of the new material Provides a detailed case study that brings together the lessons learned in the book Includes access to the companion website, [www.dataminingconsultant.com](http://www.dataminingconsultant.com), with exclusive password-protected instructor content Data Mining and Predictive Analytics will appeal to computer science and statistic students, as well as students in MBA programs, and chief executives.

This comprehensive encyclopedia covers the most noteworthy attacks while also focusing on the myriad issues that surround cybercrime. It includes entries on such topics as the different types of cyberattacks, cybercrime techniques, specific cybercriminals and cybercrime groups, and cybercrime investigations. It also provides detailed information on all of the latest developments in this constantly evolving field.

*Islamic Finance* Shayerah Ilias, 2009-12 Discusses Islamic finance, which is based on principles of *shariah*, or Islamic law. Major principles of *shariah* are a ban on interest, a ban on uncertainty, adherence to risk-sharing and profit-sharing, promotion of ethical invest. that enhance society, and asset-backing. The international market for Islamic finance has grown

between 10% to 15% annually in recent years. Critics of Islamic finance express concerns about possible ties between Islamic finance and political agendas or terrorist financing and the use of Islamic finance to circumvent U.S. economic sanctions. Proponents argue that Islamic finance presents significant new business opportunities and provides alternate methods for capital formation and economic development. Graph.

**Practical Text Mining and Statistical Analysis for Non-structured Text Data Applications** Gary Miner, 2012-01-11 The world contains an unimaginably vast amount of digital information which is getting ever vaster ever more rapidly. This makes it possible to do many things that previously could not be done: spot business trends, prevent diseases, combat crime and so on. Managed well, the textual data can be used to unlock new sources of economic value, provide fresh insights into science and hold governments to account. As the Internet expands and our natural capacity to process the unstructured text that it contains diminishes, the value of text mining for information retrieval and search will increase dramatically. This comprehensive professional reference brings together all the information, tools and methods a professional will need to efficiently use text mining applications and statistical analysis. The Handbook of Practical Text Mining and Statistical Analysis for Non-structured Text Data Applications presents a comprehensive how- to reference that shows the user how to conduct text mining and statistically analyze results. In addition to providing an in-depth examination of core text mining and link detection tools, methods and operations, the book examines advanced preprocessing techniques, knowledge representation considerations, and visualization approaches. Finally, the book explores current real-world, mission-critical applications of text mining and link detection using real world example tutorials in such varied fields as corporate, finance, business intelligence, genomics research, and counterterrorism activities--

Fighting the Cold War John R. Galvin,2015-04-28 When four-star general John Rogers Galvin retired from the US Army after forty-four years of distinguished service in 1992, the Washington Post hailed him as a man without peer among living generals. In *Fighting the Cold War: A Soldier's Memoir*, the celebrated soldier, scholar, and statesman recounts his active participation in more than sixty years of international history -- from the onset of World War II through the fall of the Berlin Wall and the post--Cold War era. Galvin's illustrious tenure included the rare opportunity to lead two different Department of Defense unified commands: United States Southern Command in Panama from 1985 to 1987 and United States European Command from 1987 to 1992. In his memoir, he recounts fascinating behind-the-scenes anecdotes about his interactions with world leaders, describing encounters such as his experience of watching President José Napoleón Duarte argue eloquently against US intervention in El Salvador; a private conversation with Pope John Paul II in which the pontiff spoke to him about what it means to be a man of peace; and his discussion with General William Westmoreland about soldiers' conduct in the jungles of Vietnam and Cambodia. In addition, Galvin recalls his complex negotiations with a number of often difficult foreign heads of state, including Manuel Noriega, Augusto Pinochet, Mikhail Gorbachev, and Ratko Mladić. As NATO Supreme Allied Commander in Europe during the tumultuous five years that ended the Cold War, Galvin played a key role in shaping a new era. *Fighting the Cold War* illuminates his leadership and service as one of America's premier soldier-statesmen, revealing him to be not only a brilliant strategist and consummate diplomat but also a gifted historian and writer who taught and mentored generations of students.

**The White Shadow** Andrea Eames,2012 Tinashe is a young Shona boy living in a small village in rural Rhodesia. The guerilla war of the late 1960s haunts the bushlands, but it only infrequently affects his quiet life; school, swimming in the river, playing with the other kids on the kopje. When his younger sister, Hazvinei, is born, Tinashe knows at once that there is something special about her. Their life in the village, once disturbed only by the occasional visits of his successful uncle and city cousin, Abel, now becomes entangled with the dual forces of the Shona spirit world and the political turmoil of the nation. As Tinashe, Hazvinei and Abel grow older, their destinies entangle in ways they never expected. Tinashe is prepared to follow his sister anywhere - but how far can he go to keep her safe when the forces threatening her are so much darker and more sinister than he suspected?Andrea Eames weaves together folklore and suspense in this compelling tale of a boy struggling to do the right thing in an unpredictable world.

English Language Learners with Special Education Needs  
Alfredo J. Artiles,Alba A. Ortiz,2002 Because procedures are not in place in many schools and school districts to successfully determine academic placement of English language learners, many of these learners are placed inappropriately. Some who don't need special services (other than English as a second language) may find themselves in special education classes. Others who need special services may be placed in regular classes without the extra supports and services that they need. Working with English language learners and with students requiring special education services requires collaboration among teachers, school psychologists, speech pathologists, and assessment personnel with expertise in general, bilingual, and special education.
