**Foraging Theory Applied to Medical Information Searching** Mai Dwairy,2012-10 Workload and other constraints prevent General Practitioners from accessing medical evidence for clinical decisions. This problem was studied in New Zealand GPs using Optimal Foraging Theory developed in ecology. GPs'

information search strategies were modelled as sequential steps associated with costs and benefits measured from logbooks of actual searches. By consulting the most profitable sources, switching sources when unsuccessful, and double checking, GPs seem close to an optimal trade-off between maximizing search success and information reliability, and minimizing searching time. Subsidised training in information searching and provision of a literature search service are two inferred avenues to access medical evidence.

High Minds Simon Heffer,2022-04-05 An ambitious exploration of the making of the Victorian Age—and the Victorian mind—by a master historian. Britain in the 1840s was a country wracked by poverty, unrest, and uncertainty; there were attempts to assassinate the queen and her prime minister;

and the ruling class lived in fear of riot and revolution. By the 1880s it was a confident nation of progress and prosperity, transformed not just by industrialization but by new attitudes to politics, education, women, and the working class. That it should have changed so radically was very largely the work of an astonishingly dynamic and high-minded group of people—politicians and philanthropists, writers and thinkers—who in a matter of decades fundamentally remade the country, its institutions and its mindset, and laid the foundations for modern society. *High Minds* explores this process of transformation as it traces the evolution of British democracy and shows how early laissez-faire attitudes to the fate of the less fortunate turned into campaigns to improve their lives and prospects. The narrative analyzes the birth of new attitudes in education, religion, and science. And *High Minds* shows how even such aesthetic issues as taste in architecture collided with broader debates about the direction that the country should take. In the process, Simon Heffer looks at the lives and deeds of major politicians; at the intellectual arguments that raged among writers and thinkers such as Matthew Arnold, Thomas Carlyle, and Samuel Butler; and at the great projects” of the age, from the Great

Exhibition to the Albert Memorial. Drawing heavily on previously unpublished documents, he offers a superbly nuanced portrait into life in an extraordinary era, populated by extraordinary people—and show how the Victorians’ pursuit of perfection gave birth to the modern Britain we know today.

Image Correlation for Shape, Motion and Deformation Measurements Michael A. Sutton, Jean Jose Orteu, Hubert Schreier, 2009-04-21 Image Correlation for Shape, Motion and Deformation Measurements provides a comprehensive overview of data extraction through image analysis. Readers will find an in-depth look into various single- and multi-camera models (2D-DIC and 3D-DIC), two- and three-dimensional computer vision, and volumetric digital image correlation (VDIC). Fundamentals of accurate image matching are described, along with presentations of both new methods for quantitative error estimates in correlation-based motion measurements, and the effect of out-of-plane

motion on 2D measurements. Thorough appendices offer descriptions of continuum mechanics formulations, methods for local surface strain estimation and non-linear optimization, as well as terminology in statistics and probability. With equal treatment of computer vision fundamentals and techniques for practical applications, this volume is both a reference for academic and industry-based researchers and engineers, as well as a valuable companion text for appropriate vision-based educational offerings.

*Theory of Plates and Shells* Christian Mittelstedt, 2023-06-18 This book deals with the analysis of plates and shells and is divided into four sections. After briefly introducing the basics of elasticity theory and the energy methods of elastostatics in the first section, the second section is devoted to the statics of disk structures. In addition to isotropic disks in Cartesian and polar coordinates, approximation methods and anisotropic disks are also discussed. The following third section deals with

plate structures, covering plates in Cartesian and polar coordinates, and also discussing approximation methods and higher-order plate theories. Other chapters in this section discuss plate buckling as well as geometric nonlinear analysis and laminated plates. The fourth and final section of this book is devoted to shells, i.e., curved thin structures, following the common division into membrane theory on the one hand and bending theory on the other hand. This book is intended for students at universities, but also for engineers in practice and researchers in engineering science.

Jayne Mansfield Jocelyn Faris,1994-11-30 People today remember Jayne Mansfield as a famous Hollywood movie star. However, she starred in only three American movies before moving to low-budget European films. She was a master of publicity who appeared in newspapers across the nation almost daily. The media focused on her figure and her stormy love life. Through her constant exposure in the press, she gave the public the false impression that she was a major movie star. This book charts the captivating life and career of Jayne Mansfield. A biography overviews her rise to fame, her

three marriages and five children, and her death in a grisly automobile accident at an early age. The chapters that follow are each devoted to her performances in a particular genre, such as film, stage, and television. Each chapter contains annotated entries for her work in that media, providing cast and credit listings, plot summaries, review excerpts, and commentary. Appendices list her appearances on magazine and record covers, and an annotated bibliography discusses additional sources of information.
