Women and Islamic Law in a Non-Muslim State Ahron Layish, 2017-09-04 This book is methodologically unique in scholarly literature on Muslim society. Its originality lies in the fact that the rich material offered by the shari'a courts is given a thorough analysis with a view to drawing conclusions about the present-day phenomena in Arab society and processes that the society has been undergoing in modern times. Aharon Layish examines every aspect of the social status of Muslim women that finds expression in the shari'a courts: the age of marriage, stipulations inserted in the marriage contract, dower, polygamy, maintenance and obedience, divorce, custody of the children, guardianship, and succession. Each chapter opens with a short legal introduction based on all the sources of law applying in shari'a courts, followed by social analyses and a study of the attitudes and approaches of the qadis, or Muslim religious judges. Layish examines the relationship between shari'a and Israeli legislation: Do shari'a courts have regard to the provisions of Israeli law? What is the relationship between shari'a and social custom, and which is decisive in regard to Israeli Muslim women? To what extent does Israeli law actually affect Israeli Muslim women? What is the attitude of the qadis, toward Israeli legislation? Women and Islamic Law in a Non-Muslim State is an important and original study that will be of interest to students and scholars of Islamic law, comparative law, sociology, and modernization.

**Time-Frequency Representations** Richard Tolimieri, Myoung An, 2012-12-06 The aim of this work is to present several topics in time-frequency analysis as subjects in abelian group theory. The algebraic point of view pre dominates as questions of convergence are not considered. Our approach emphasizes the unifying role played by group structures on the development of theory and algorithms. This book consists of two main parts. The first treats Weyl-Heisenberg representations over finite abelian groups and the second deals

with multivariate filter structures over free abelian groups of finite rank. In both, the methods are dimensionless and coordinate-free and apply to one and multidimensional problems. The selection of topics is not motivated by mathematical necessity but rather by simplicity. We could have developed Weyl-Heisenberg theory over free abelian groups of finite rank or more generally developed both topics over locally compact abelian groups. However, except for having to discuss conditions for convergence, Haar measures, and other standard topics from analysis the underlying structures would essentially be the same. A recent collection of papers [17] provides an excellent review of time-frequency analysis over locally compact abelian groups. A further reason for limiting the scope of generality is that our results can be immediately applied to the design of algorithms and codes for time frequency processing.
