**COVID-19 and Existential Positive Psychology (PP2.0): The New Science of Self-Transcendence**

Paul T. P. Wong In the era of COVID-19, many people have suffered high levels of stress and mental health problems. To cope with the widespread of suffering (physical, psychological, social, and economical) the positive psychology of personal happiness is no longer the sole approach to examine personal wellbeing. Other approaches such as Viktor Frankl's theory of self-transcendence provide a promising framework for

research and intervention on how to achieve resilience, wellbeing, and happiness through overcoming suffering and self-transcendence. The existential positive psychology of suffering complements the positive psychology of happiness, which is championed by Martin Seligman, as two equal halves of the circle of wellbeing and optimal mental health. This Research Topic aims to examine the different approaches to Positive Psychology and their influence on individual wellbeing during the COVID-19 era. One of the exciting development in the positive psychology of wellbeing is the mounting research on the adaptive benefits of negative emotions, such as shame, guilt, and anger, as well as the dialectical process of balancing negative and positive emotions. As an example, based on all the empirical research and Frankl's self-transcendence model, Wong has developed the existential positive psychology of suffering (PP2.0) as the foundation for flourishing. Here are a few main tenets of PP2.0: (1) Life is suffering and a constant struggle throughout every stage of development, (2) The search for self-transcendence is a primary motive guided by the meaning mindset and mindful mindset. (3) Wellbeing cannot be sustainable without overcoming and transforming suffering. In this Research Topic we welcome diverse approaches discussing the following points: • The dialectic process of overcoming the challenges of every stage of development as necessary for personal growth and self-transcendence; • The role of self-transcendence in resilience, virtue, meaning, and

happiness; • The upside of negative emotions; • The new science of resilience based on cultivating the resilient mindset and character; • How to make the best use of suffering to achieve out potentials & mental health.

Northrop F-5 Gérard Paloque 2013 Although it was originally intended to provide the USAF with a lightweight fighter, in the end the Northrop F-5 had rather a marginal career in the United States, which used it mainly for training pilots in aerial combat. On the other hand it was a real success in the export market, with more than twenty countries around the world choosing this little effective twin-engined fighter which above all was cheap, particularly when it was partly subsidized

by the United States. Its success continued with the improved version, the Tiger II, so much so that in all more than 2600 examples of all versions of the F-5 came of the production lines with a few of them still flying nowadays in some air forces, thanks to the various update programs which have permitted air forces to envisage prolonging their use until 2015-20.
