**Managing Domestic Dissent in First World War Britain** Brock Millman,2014-01-14 The author argues that the way the British Government managed dissent during World War I is important for understanding the way that the war ended. He argues that a comprehensive and effective system of suppression had been developed by the war's end in 1918, with a greater level in reserve.

**Tank Characterization Report for Single-Shell Tank T-102** ,1994 Tank 241-T-102 (hereafter referred to as T-102) is a 530,000 gallon single-shell waste tank located in the 200 West T Tank farm at the Hanford Site. In 1993, two cores were taken from this tank and analysis of the cores was conducted by Battelle's 325-A Laboratory. Characterization of the waste in this tank was conducted to support Hanford Federal Facility Agreement and Consent Order (Tri-Party Agreement) Milestone M-44-05. Tank T-102 was constructed in 1943 and put into service in 1945; it is the second tank in a cascade system with Tanks T-101 and T-103. During its process history, Tank T-102 received mostly Metal Waste (MW) from the Bismuth Phosphate Process and Coating Waste (CW) from the REDOX Process via the cascade from Tank T-101 and in transfers from Tank C-102. In 1956, the MW was removed from T-102 by pumping and sluicing'. This tank was declared inactive and retired from service in 1976. In 1981, intrusion prevention and stabilization measures were taken to isolate the waste in T-102. The tank presently contains approximately 121,100 liters (32,000 gallons) of liquid and sludge-like waste. Historically, there are no unreviewed safety issues associated with this tank and none were revealed after reviewing the data from the latest core sampling event in 1993. An extensive set of analytical measurements was performed on the core composites. The major constituents (>0.5 wt%) of the waste are water, aluminum, sodium, iron, and nitrate, ordered from the largest concentration to the smallest. The concentrations and inventories of these and other constituents are given. The results of the chemical analyses have been compared to the dangerous waste codes in the Washington Dangerous Waste Regulations (WAC 173-303).

*The Perils of Federalism* Lisa L. Miller,2008-09-29 Much of the existing research on race and crime focuses on the manipulation of crime by political elites or the racially biased nature of crime policy. In contrast, Lisa L. Miller here specifically focuses on political and socio-legal institutions and actors that drive these developments and their relationship to the politics of race and poverty; in particular, the degree to which citizens at most risk of victimization--primarily racial minorities and the poor--play a role in the development of political responses to crime and violence. Miller begins her study by providing a detailed analysis of the narrow and often parochial nature of national and state crime politics, drawing a sharp contrast to the active and intense local political mobilization on crime by racial minorities and the urban poor. In doing so, *The Perils of Federalism* illustrates the ways in which the structure of U.S. federalism has contributed to the absence of black and poor victims of violence from national policy responses to crime and how highly organized but narrowly focused interest groups, such as the National Rifle Association, have a disproportionate influence in crime politics. Moreover, it illustrates how the absence of these groups from the policy process at other levels promotes policy frames that are highly skewed in favor of police, prosecutors, and narrow citizen interests, whose policy preferences often converge on increasing punishments for offenders. Ultimately, *The Perils of Federalism* challenges the conventional wisdom about the advantages of federalization and explains the key disadvantages that local communities face in trying to change policy.

**Kinetic Theory of Particles and Photons** Joachim Oxenius,2012-12-06 Many laboratory and astrophysical plasmas show deviations from local thermodynamic equilibrium (LTE). This monograph develops non-LTE plasma spectroscopy as a kinetic theory of particles and photons, considering the radiation field as a photon gas whose distribution function (the radiation intensity) obeys a kinetic equation (the radiative transfer equation), just as the distribution functions of particles obey kinetic equations. Such a unified approach provides clear insight into the physics of non-LTE plasmas. Chapter 1 treats the principle of detailed balance, of central importance for understanding the non-LTE effects in plasmas. Chapters 2, 3 deal with kinetic equations of particles and photons, respectively, followed by a chapter on the fluid description of gases with radiative interactions. Chapter 5 is devoted to the H theorem, and closes the more general first part of the book. The last two chapters deal with more specific topics. After briefly discussing optically thin plasmas, Chap. 6 treats non-LTE line transfer by two-level atoms, the line profile coefficients of three-level atoms, and non-Maxwellian electron distribution functions. Chapter 7 discusses topics where momentum exchange between matter and radiation is crucial: the approach to thermal equilibrium through interaction with blackbody radiation, radiative forces, and Compton scattering. A number of appendices have been added to make the book self-contained and to treat more special questions. In particular, Appendix B contains an introductory discussion of atomic line profile coefficients.
