The Art of Conjecturing, Together with Letter to a Friend on Sets in Court Tennis Jacob Bernoulli,2006 Part I reprints and reworks Huygens's On Reckoning in Games of Chance. Part II offers a thorough treatment of the mathematics of combinations and permutations, including the numbers since known as Bernoulli numbers. In Part III, Bernoulli solves more complicated problems of games of chance using that mathematics. In the final part, Bernoulli's crowning achievement in mathematical probability becomes manifest he applies the mathematics of games of chance to the problems of epistemic probability in civil, moral, and economic matters, proving what we now know as the weak law of large numbers.

Particle Physics and Introduction to Field Theory T.D.. Lee,1981-01-01 This unique book gives a unified presentation of the entire subject of particle physics, starting with a self-contained discussion of quantum field theory and going on with the symmetry and interaction of particles. It expresses the author's personal approach to the subject, and will be useful to beginning students as well as seasoned workers in the field.

Incitement on Trial Richard Ashby Wilson,2017-08-18 International and national armed conflicts are usually preceded by a media campaign in which public figures foment ethnic, national, racial or religious hatred, inciting listeners to acts of violence. Incitement on Trial evaluates the efforts of international criminal tribunals to hold such inciters criminally responsible. This is an unsettled area of international criminal law, and prosecutors have often struggled to demonstrate a causal connection between speech acts and subsequent crimes. This book identifies 'revenge speech' as the type of rhetoric with the greatest effects on empathy and tolerance for violence. Wilson argues that inciting speech should be handled under the preventative doctrine of inchoate crimes, but that once international crimes have been committed, then ordering and complicity are the most appropriate forms of criminal liability. Based in extensive original research, this book proposes an evidence-based risk assessment model for monitoring political speech.

Techniques and Concepts of High-Energy Physics VI Thomas Ferbel,2012-12-06 The sixth Advanced Study Institute (ASI) on Techniques and Concepts of High Energy Physics was held at the Club St. Croix, in St. Croix, U.S. Virgin Islands. The ASI brought together a total of 70 participants, from 21 different countries. Despite logistical problems caused by hurricane Hugo, it was a very successful meeting. Hugo's destruction did little to dampen the dedication of the inspiring lecturers and the exceptional enthusiasm of the student body; nevertheless, the immense damage caused to the beautiful island was very saddening indeed. The primary support for the meeting was again provided by the Scientific Affairs Division of NATO. The ASI was cosponsored by the U.S. Department of Energy, by Fermilab, by the National Science Foundation, and by the University of Rochester. A special contribution from the Oliver S. and Jennie R. Donaldson Charitable Trust provided an important degree of flexibility, as well as support for worthy students from developing countries. As in the case of the previous ASIs, the scientific program was designed for advanced graduate students and recent PhD recipients in experimental particle physics. The present volume of lectures should complement the material published in the first five ASIs, and prove to be of value to a wider audience of

physicists.

The Hydrogen Atom G. Franco Bassani,Massimo Inguscio,Theodor Hänsch,2012-12-06 Atomic hydrogen, the simplest of all stable atoms, has been a challenge to spectroscopists and theoreticians for many years. Here, as in similar systems like positronium, muonium and possibly helium, the accuracy of theoretical predictions is comparable to that of experimental measurements. Hence exciting confrontations are possible. This together with expected large experimental improvements explains the strong interest in the symposium held in Pisa in June-July 1988. The resulting book completely covers the precision spectroscopy of atomic hydrogen and hydrogen-like systems, and also discusses aspects of QED and the influence of strong fields.
