Transport in Laser Microfabrication Costas P.
Grigoropoulos,2009-07-30 Emphasising the fundamentals of
transport phenomena, this book provides researchers and
practitioners with the technical background they need to
understand laser-induced microfabrication and materials
processing at small scales. It clarifies the laser/materials coupling
mechanisms, and discusses the nanoscale confined laser
interactions that constitute powerful tools for top-down
nanomanufacturing. In addition to discussing key and emerging
applications to modern technology, with particular respect to
electronics, advanced topics such as the use of lasers for
nanoprocessing and nanomachining, the interaction with polymer
materials, nanoparticles and clusters, and the processing of thin
films are also covered.
