Aboriginal Conditions Jerry P. White,Paul S. Maxim,Dan Beavon,2011-11-01 Aimed at three main constituencies - Aboriginal and non-Aboriginal social scientists, government and Aboriginal policymakers, and Aboriginal communities - the book has multiple purposes. First, it presents findings from recent research, with the goal of advancing research agenda, and stimulating positive social development. Second, it encourages greater links between the social scientific and external research communities and demonstrates the kind of research needed as a foundation for public policy. Finally, it acts as a guide to research methods for Aboriginal communities and organizations, and promotes cooperation between researchers and Aboriginal peoples in an effort to ensure that research decisions serve both groups equally. A vital addition to public policy and Native studies, Aboriginal Conditions will be welcomed by social scientists, policymakers, and academics working in these fields.

Serengeti II A. R. E. Sinclair,Peter Arcese,1995-08 Serengeti II: Dynamics, Management, and Conservation of an Ecosystem brings together twenty years of research by leading scientists to provide the most most thorough understanding to date of the spectacular Serengeti-Mara ecosystem in East Africa, home to one of the largest and most diverse populations of animals in the world. Building on the groundwork laid by the classic Serengeti: Dynamics of an Ecosystem, published in 1979 by the University of Chicago Press, this new book integrates studies of the ecosystem at every level—from the plants at the bottom of the visible food chain, to the many species of herbivores and predators, to the system as a whole. Drawing on new data from many long-term studies and from more recent research initiatives, and applying new theory and computer technology, the contributors examine the large-scale processes that have produced the Serengeti's extraordinary biological diversity, as well as the interactions among species and between plants and animals and their environment. They also introduce computer modeling as a tool for exploring these interactions, employing this new technology to test and anticipate the effects of social, political, and economic changes on the entire ecosystem and on particular species, and so to shape future conservation and management strategies.

Constraints on Language Acquisition Helen Tager-Flusberg, 2014-02-25 After decades of research most scholars generally agree that language acquisition is a complex and multifaceted process that involves the interaction of innate biologically-based mechanisms devoted to language, other non-linguistic cognitive and social mechanisms, linguistic input, and information about the social and physical world. Theoretical work in the field of language acquisition now needs to focus in greater depth and detail on some specific aspects of this general model, which is the main goal of this book. The chapters in this volume provide some new insights into one of the most remarkable accomplishments achieved by almost all children. The particular questions that are raised by contributors include: \* What kinds of constraints operate on the process of language development? \* Which aspects of the acquisition process depend on language-specific mechanisms? \* Are there critical brain structures necessary for the acquisition of language? \* What role do cognitive and social mechanisms play in language development? \* How critical is perceptual input about the physical and social world? \* What is the specific role played by linguistic input in the child's construction of a linguistic system? Questions are addressed from the perspective of children who come to the task of acquiring language with many hurdles to overcome, including deafness and blindness, mental retardation, autism, and prenatal or perinatal brain damage involving the left hemisphere. Each section contributes some insight on how an innate language-specific biological substrate interacts with cognitive and social factors, as well as external information, to support the child's construction of a linguistic system. Studies of atypical children offer a singular contribution to this enterprise by allowing us to see the specific influences of each component, and in turn, they shed new light on how all children are able to acquire language so effortlessly and during such a brief period of development.
