Appraisal and Beyond Nico H. Frijda, 1993 Appraisal is a central notion in current theory. A process of appraisal can be considered the key to understanding that emotions differ for different individuals. Assuming a process of appraisal that mediates between events and emotions is the clue to understanding that a particular event evokes an emotion in one individual and not in another, or evokes an emotion at one moment, and no emotion, or a weaker or stronger one, at another moment. A process of appraisal also explains why an emotionally charged event elicits this particular emotion, and not another one, in this particular individual under these particular conditions. The process of appraisal accounts for the fact that the arousal of an emotion depends upon the meaning of the event for the individual and explains why the emotion that is evoked often depends upon quite subtle aspects of that meaning. Arousal of emotions is determined by the interaction between events, the individual's conceptions or expectations as to what constitutes well-being for him or her and the individual's expectations that he or she will be able to deal or cope with the event and, if so, in what manner or how effectively. To deal with these issues the notion of appraisal was developed in the early 1960s. In the early 1980s, a torrent of theoretical and empirical work broke loose in which the cognitive variables involved were spelled out in great detail. A large number of theoretical and empirical studies from quite diverse laboratories generated a highly cumulative body of research. However, it also generated disagreements, important questions (such as those regarding the importance of the place of cognition in emotion), and methodological objections. Also, few accounts were produced of the processes by which appraisal is supposed to operate. This Special Issue is one endeavour to take stock of the findings and problems concerning appraisal. It is called *Appraisal and Beyond*, because it invited, and received, from leading contributors to the field, state-of-the-art reports of appraisal research, critical comments and suggestions that should carry the theory further.

Structural Classification of Minerals J. Lima-de-Faria, 2012-12-06 This book presents the third volume of a complete development of the new structural classification of minerals, which is based on the internal crystal structure, and is therefore its natural classification. Because of the large domain of the mineral kingdom, this work is divided in three volumes, in which the minerals are ordered from the structurally simple to the more complex. Audience: This work will be of particular interest to teachers and research workers of in mineralogy, and in inorganic crystal structures in academia.

Antisthenes of Athens Susan Prince, 2015-12-03 Antisthenes of Athens (c. 445-365 BCE) was a famous ancient disciple of Socrates, senior to Plato by fifteen years and inspirational to Xenophon. He is relevant to two of the greatest turning points in ancient intellectual history, from pre-Socraticism to Socraticism, and from classical Athens to the Hellenistic period. A better understanding of Antisthenes leads to a better understanding of the intellectual culture of Athens that shaped Plato and laid the foundations for Hellenistic philosophy and literature as well. Antisthenes wrote prolifically, but little of this text remains today. Susan Prince has collected all the surviving passages that pertain most closely to Antisthenes' ancient reputation and literary production, translates them into

English for the first time, and sets out the parameters for their interpretation, with close attention to the role Antisthenes likely played in the literary agenda of each ancient author who cited him. This is the first translation of Antisthenes' remains into English. Chapters present the ancient source, the original Greek passage, and necessary critical apparatus. The author then adds the modern English translation and notes on the context of the preservation, the significance of the testimonium, and on the Greek. Several new readings are proposed. Antisthenes of Athens will be of interest to anyone seeking to understand Antisthenes and his intellectual context, as well as his contributions to ancient literary criticism, views on discourse, and ethics.

Al-Fārābī and Aristotelian Syllogistics Joep Lameer,2021-12-13 Al-Fārābī and Aristotelian Syllogistics deals with an important chapter in the history of Aristotelian logic in early medieval Islam and offers a unique and comprehensive analysis of the writings of the outstanding Muslim philosopher Abū Nasr al-Fārābī (d. 950/51). The first part focuses on a wide range of subjects relating to syllogistic theory proper; the second part deals with its application in the context of Islamic law and theology, and concludes with an in-depth analysis of the way in which Aristotelian logic came to be integrated into Muslim political thought. The sections on syllogistic theory proper are especially important for those interested in the history of Arabic logic; the remaining sections are required reading for historians of Islamic law, theology, and Islamic political philosophy.

Handbook Of Pi And Pid Controller Tuning Rules Aidan O'dwyer,2003-03-21

This book presents tuning rules for PI and PID controllers for processes with time delay. It comprehensively compiles, using a unified notation, the tuning rules proposed over six decades (1942-2002); categorises the tuning rules and gives application information about each rule; and discusses controller architecture and process modelling issues, and the performance and robustness of loops compensated with PI or PID controllers. The book will be useful to practitioners in control and instrument engineering, as well as students and educators in technical colleges and universities.

Health Inequities in Canada Olena Hankivsky,2011-05-01 There is a growing recognition that existing theories on, and approaches to, health inequities are limited in their ability to capture how they are produced through changing, co-constituted, and intersecting effects of multiple forms of

oppression. Intersectionality considers the interactions and combined impacts of social locations and structural processes on the creation and perpetuation of inequities. This volume brings together activists, scholars, and community-based researchers to apply interpretations of intersectionality to health and organizational governance cases. By addressing specific health issues, it demonstrates that inequities cannot be understood without the interrogation of power and diverse social locations and structures that shape lives and experiences of health.

Reviving Social Democracy David Laycock, Lynda Erickson, 2014-11-01 In 2011, the NDP stunned political pundits by becoming the Official Opposition in the House of Commons. After near collapse in the 1993 election, how did the NDP manage to win triple the seats of its Liberal rivals and take more than three-quarters of the ridings in Quebec? This book examines the federal NDP's transformation from nearly dead party to new power player within a volatile party system. Its early chapters -- on the party's emergence in the 1960s, its presence in Quebec, and the Jack Layton factor -- pave the way for insightful analyses of issues such as party modernization, changing ideology, voter profile, and policy formation that played a significant role in driving the Orange Crush phenomenon.
