*The Strategy of the Genes* C.H. Waddington,2014-04-29 First published in 1957, this essential classic work bridged the gap between analytical and theoretical biology, thus setting the insights of the former in a context which more sensitively reflects the ambiguities surrounding many of its core concepts and objectives. Specifically, these five essays are concerned with some of the major problems of classical biology: the precise character of biological organisation, the processes which generate it, and the specifics of evolution. With regard to these issues, some thinkers suggest that biological organisms are not merely distinguishable from inanimate ‘things’ in terms of complexity, but are in fact radically different qualitatively: they exemplify some constitutive principle which is not elsewhere manifested. It is the desire to bring such ideas into conformity with our understanding of analytical biology which unifies these essays. They explore the contours of a conceptual framework sufficiently wide to embrace all aspects of living systems.

**Life and Art** James W. Hamilton,2018-04-19 In this volume an inquiry into the nature of the creative process is attempted by paying close attention to the lives of various artists, poets, novelists and playwrights, and selected works of each in order to demonstrate an essential relationship between the two, and that it is most difficult to delineate the nuances of the creative act by treating them as separate entities. Emphasis is placed upon the effect of early trauma, such as object loss and various forms of deprivation, as a powerful unconscious motivating factor and upon the dream and transitional object as facilitators of the creative effort.
