**Vertical Specialization and Trade Surplus in China** Wang Wei,2013-05-09 The traditional flow of goods from primary production through to manufacturing and consumption has expanded across international borders conterminously with globalization. Vertical specialization (VS) in processing and manufacturing in China has driven export growth. In particular, intra-industry and intra-product trade between China, the US and East Asia has increased China's trade surplus over the long term. Vertical Specialization and Trade Surplus in China aims to measure the level of VS in the Chinese manufacturing industry to provide a more accurate representation of China's trade surplus, and gives empirical analysis on provinces and products with important VS activities in order to assess China's trade value-added. Exploring the vertical division of labour, and foreign direct investment (FDI) driving China's import and export imbalance, the book is divided into eight chapters, each covering an aspect of VS in China. The first chapter outlines the aims and method of the study. Chapter two covers VS trade pattern and trade surplus. Chapter three looks at FDI and the import and export imbalance, and chapter four covers the relationship between VS and import and export of foreign invested enterprises. The fifth chapter considers the causes and prospects for growth in China-US and China-Japan trade. Chapters six and seven give an empirical analysis of VS and trade surplus, and a breakdown of VS per industry in China's provinces. Finally, chapter eight considers rebalancing imports and exports in China. Measures VS across China including the developed provinces based on the newest input-output table Presents the main provinces and products closely related to VS Gives evidence on global VS trade patterns from China's national data

**A General Theory of Crime** Michael R. Gottfredson,Travis Hirschi,1990 By articulating a general theory of crime and related behavior, the authors present a new and comprehensive statement of what the criminological enterprise should be about. They argue that prevalent academic criminology—whether sociological, psychological, biological, or economic—has been unable to provide believable explanations of criminal behavior. The long-discarded classical tradition in criminology was based on choice and free will, and saw crime as the natural consequence of unrestrained human tendencies to seek pleasure and to avoid pain. It concerned itself with the nature of crime and paid little attention to the criminal. The scientific, or disciplinary, tradition is based on causation and determinism, and has dominated twentieth-century criminology. It concerns itself with the nature of the criminal and pays little attention to the crime itself. Though the two traditions are considered incompatible, this book brings classical and modern criminology together by requiring that their conceptions be consistent with each other and with the results of research. The authors explore the essential nature of crime, finding that scientific and popular conceptions of crime are misleading, and they assess the truth of disciplinary claims about crime, concluding that such claims are contrary to the nature of crime and, interestingly enough, to the data produced by the disciplines themselves. They then put forward their own theory of crime, which asserts that the essential element of criminality is the absence of self-control. Persons with high self-control consider the long-term consequences of their behavior; those with low self-control do not. Such control is learned, usually early in life, and once learned, is highly resistant to change. In the remainder of the book, the authors apply their theory to the persistent problems of criminology. Why are men, adolescents, and minorities more likely than their counterparts to commit criminal acts? What is the role of the school in the causation of delinquency? To what extent could crime be reduced by providing meaningful work? Why do some societies have much lower crime rates than others? Does white-collar crime require its own theory? Is there such a thing as organized crime? In all cases, the theory forces fundamental reconsideration of the conventional wisdom of academicians and crimina justic practitioners. The authors conclude by exploring the implications of the theory for the future study and control of crime.

*Sacred Worlds* Chris Park,2002-11-01 This book, the first in the field for two decades, looks at the relationships between geography and religion. It represents a synthesis of research by geographers of many countries, mainly since the 1960s. No previous book has tackled this emerging field from such a broad, interdisciplinary perspective, and never before have such a variety of detailed case studies been pulled together in so comparative or illuminating a way. Examples and case studies have been drawn from all the major world religions and from all continents from both a historical and contemporary perspective. Major themes covered in the book include the distribution of religion and the processes by which religion and religious ideas spread through space and time. Some of the important links between religion and population are also explored. A great deal of attention is focused on the visible manifestations of religion on the cultural landscape, including landscapes of worship and of death, and the whole field of sacred space and religious pilgrimage.

*The Labour Party Since 1979* Eric u University of Stirling Shaw,2002-01-22 The Labour Party since 1979: Crisis and Transformation challenges the claim that Labour's only real hope for the future lies in shedding its ideological baggage. It rejects the notion taht the 'shadow budget' was the prime cause of its 1992 defeat and argues that the strategyof seeking an image of 'responsibility' and 'respectability' - which under the new leadership has become a paramount concern - does not offer the best route forward for the party. The effect of this strategy - of abandoning traditional tenets, and adopting a policy profile more to the tastes of its critics in business and the media - will be to deprive Labour of its sheet-anchor; and even if successful electorally, the price will be that the hopes and aspirations of its supporters will be highly unlikely to be fulfilled.

Self-Handicapping Raymond L. Higgins,C.R. Snyder,Steven Berglas,2013-11-11 The concept of self-handicapping can be legitimately anchored in a vari ety of intellectual contexts, some old and some newer. As this volume reminds us, Alfred Adler was perhaps the first to articulate the signifi cance of various self-defeating claims and gestures for protecting the self concept. Thus the apparent paradox of defeat in the interests of pro tection. More recently (but still more than 30 years ago), Heider's naive psychology added attributional rhetoric to the description of self-defeat ing strategies. While predominantly cognitive in its thrust, the attribu tional approach incorporated several motivational influences-especially those involving egocentric concerns. Heider hardly violated our common sense when he suggested that people are inclined to attribute their performances in a self-serving manner: the good things I caused; the bad things were forced upon me. The notion of self-handicapping strategies, proposed by Berglas and myself a little more than a decade ago, capitalized on these homely truths while adding a particular proactive twist. We not only make ex cuses for our blunders; we plan our engagements and our situational choices so that self-protective excuses are unnecessary. In doing so, we use our attributional understanding to arrange things so that flawed and failing performances will not be interpreted in ways that threaten our self-esteem.

**Feminist Perspectives on Family Care** Nancy R. Hooyman, Judith Gonyea, 1995-08-29 Today women find themselves playing an ever-increasing role in caring for older family members who are frail, developmentally disabled, or suffering from serious mental illness. While this role of women as caregivers has been documented, the actual impact on the lives of women has remained largely unstudied. In this volume, the authors examine caregiving as a central feminist issue, looking at its impact on women socially, personally, and economically. The authors review how changing family structures, the changing economy and workforce, and the changing health care demands of needy adults have impacted on women's lives. They critique existing public and private policies, demonstrating a need for fundamental structural changes in social institutions and attitudes to improve the lives of women. Finally, they propose a social model of care that is oriented toward gender justice--recognition of the work of caring and its impact upon women socially, personally, and economically. For students, scholars and practitioners in the field of gerontology, gender studies, and social work, this book is a must.
