Power System Transients Akihiro Ametani,Naoto

Nagaoka,Yoshihiro Baba,Teruo Ohno,Koichi

Yamabuki,2016-11-18 This new edition covers a wide area from transients in power systems—including the basic theory, analytical calculations, EMTF simulations, computations by numerical electromagnetic analysis methods, and field test results—to electromagnetic disturbances in the field on EMC and control engineering. Not only does it show how a transient on a single-phase line can be explained from a physical viewpoint, but it then explains how it can be solved analytically by an electric circuit theory.

Approximate formulas, which can be calculated by a pocket calculator, are presented so that a transient can be analytically evaluated by a simple hand calculation. Since a real power line is three-phase, this book includes a theory that deals with a multi-phase line for practical application. In addition, methods for tackling a real transient in a power system are introduced. This new edition contains three completely revised and updated chapters, as well as two new chapters on grounding and numerical methods.

Quebec Women and Legislative Representation

Manon Tremblay,2010-07-01 Women represent a slight majority of Quebec's population, yet they continue to occupy a minority of seats in its National Assembly and in Canada's House of Commons and Senate. To explain why this is, Manon Tremblay examines Quebec women's political engagements from 1791 to the present. She traces the path that led to women obtaining the rights to vote and run for office and then draws on statistics and interviews with female politicians to paint an in-depth portrait of women's under-representation and its main causes. Her innovative account not only documents the significant democratic deficit in Canada's parliamentary systems, it also outlines strategies to improve women's access to legislative representation in Canada and elsewhere.

Constraint Databases and Applications Bart Kuijpers, Peter Revesz, 2004-10-14 The first International Symposium on the Applications of Constraint Databases (CDB2004) took place in Paris, France, on June 12–13, 2004, just before the ACM SIGMOD and PODS conferences. Since the publication of the paper “Constraint Query Languages” by Kanoulakis, Kuper and Revesz in 1990, the last decade has seen a growing interest in constraint database theory, query evaluation, and applications, reflected in a variety of conferences, journals, and books. Constraint databases have proven to be extremely flexible and adoptable in environments that relational database systems cannot serve well, such as geographic information systems and bioinformatics. This symposium brought together people from several diverse areas all contributing to the practice and the application of constraint databases. It was a continuation and extension of previous workshops held in Friedrichshafen, Germany (1995), Cambridge, USA (1996), Delphi, Greece (1997), and Seattle, USA (1998) as well as of the work in the comprehensive volume “Constraint Databases” edited by G. Kuper, L. Libkin and J. Paredaens (2000) and the textbook “Introduction to Constraint Databases” by P. Revesz (2002). The aim of the symposium was to open new and future directions in constraint database research; to address constraints over domains other than the reals; to contribute to a better implementation of constraint database systems, in particular of query evaluation; to address efficient quantifier elimination; and to describe applications of

constraint databases.
