**T-26 Light Tank** Steven J. Zaloga, 2015-01-20 The T-26 was the first major Soviet armour program of the 1930s, beginning as a license-built version of the British Vickers 6-ton export tank. Although the T-26 retained the basic Vickers hull and suspension, the Red Army began to make extensive changes to the turret and armament, starting with the addition of a 45mm tank gun in 1933. The T-26 was built in larger numbers than any other tank prior to World War II. Indeed, more T-26 tanks were manufactured than the combined tank production of Germany, France, Britain, and the United States in 1931-40. This book surveys the development of the T-26 as well as its combat record in the Spanish Civil War, the war in China, the border wars with Poland and Finland in 1939-40, and the disastrous battles of 1941 during Operation Barbarossa.

**Light Tanks** Mikhail Baryatinskiy, 2006 It is one of the ironies of Soviet tank development that a country opposed to free enterprise and capitalism was largely reliant on influences from Britain and the USA for many of its early designs. However, unhindered by many of the tactical constraints that affected tank development in the West, the Red Army was able to acquire and develop technology that was under-rated in both Britain and the USA. From Britain, the famous manufacturer Vickers produced a Six-Ton light tank; effectively rejected by the War Office, one example was acquired by the Russians and this formed the basis of the Russian T-26 of 1931. Further British designs also influenced the later light tanks, equipment which was pivotal to the Red Army during its campaigns in Manchuria, Finland and against the initial German assault in 1941. In the USA, Walter Christie was also largely ignored as a designer but, as with Vickers, his designs came to be highly important. His influence was seen in the 'BT' - short for 'Bystrochodri' or 'Fast Tank' - series of light-medium tanks that was first introduced in 1932. The BT series saw service in Spain, Manchuria, Finland and in the defense of Russia itself in 1941. The critical aspect of the Christie design was that the vehicles were capable of operating both with nor without tracks; in the latter case eight road wheels carried the weight of the vehicle, with steering being achieved via a steering wheel acting in conjunction with the clutch/brake system. In the second of the new 'Soviet Tanks' series, Mikhail Baryatinsky provides the reader with a comprehensive account of the development and operational record of Soviet light tanks. Utilizing photographs, line drawings and specially prepared artworks, he provides a detailed portrait of these highly successful tanks. Aimed at the modeler, military historian and war gamer, the new 'Soviet Tanks' series is designed to provide, probably for the first time in the English language, authoritative information on the classic Soviet tank designs of the 20th century. The series will be required reading for all those interested in the development of armored warfare over the past 100 years.

*Russian Light Tank T-26* Luca Stefano Cristini, 2023 The Russian T-26 was a light tank, designed for infantry support, produced in the Soviet Union from 1931. It did not originate as an autonomous design, but was mainly derived from the British Vickers 6-ton or Vickers Type E vehicle. The T-26 tanks were armed with two parallel turrets in the centre of the hull, each equipped with a light machine gun. The next step was to install a 27-mm or 37-mm cannon on one turret. This was replaced by a 45 mm piece, and this increased the armour-piercing and explosive power. Known as the Mod. 1933, it was a great success and was produced, alone, in around 5,500 examples; an exceptional run for the time. Versions derived from the T-26 were: the OT-26 flamethrower with a flamethrower instead of a cannon, the OT-33 which had both, the ST-26 bridge-carrier to give tank divisions the necessary mobility against natural obstacles, the T-26 A-4 (U) railing radio command tank, and many others...

**Biology of Root Formation and Development** Arie Altman,Yoav Waisel,2012-12-06 This book contains the majority of the presentations of the Second International Symposium on the Biology of Root Formation and Development that was held in Jerusalem, Israel, June 23---28, 1996. Following the First Symposium on the Biology of Adventitious Root Formation, held in Dallas, USA, 1993, we perceived the need to include all kinds of roots, not only the shoot-borne ones. The endogenous signals that control root formation. and the subsequent growth and development processes, are very much alike, regardless of the sites and sources of origin of the roots. Therefore, we included in the Second Symposium contributions on both shoot-borne (i.e., adventitious) roots and root-borne (i.e., lateral) roots. Plant roots have remained an exciting and an intriguing field of science. During the years that followed the first symposium, an exceptional proliferation of interest in root biology has developed, associated with the intensive research activity in this field and the contemporary developments in the understanding of root function and development. New methods have been applied, and old ideas and interpretations were reexamined. Altogether, it became necessary to update our viewpoints and to expand them.
