Lewis,2008 Social networks have emerged as a major trend in computing and social paradigms in the past few years. The social network model helps to inform the study of community behavior, allowing qualitative and quantitative assessments of how people communicate and the rules that govern communication. Social Networking and Community Behavior Modeling: Qualitative and Quantitative Measures provides a clear and consolidated view of current social network models. This work explores new methods for modeling, characterizing, and constructing social networks. Chapters contained in this book study critical security issues confronting social networking, the emergence of new mobile social networking devices and applications, network robustness, and how social networks impact the business aspects of organizations.

Remote Sensing and Global Climate Change Robin A. Vaughan, Arthur P. Cracknell, 2013-06-29 Experts report the state of the art in the study of global climate change using remote sensing techniques. Topics covered include the principles of remote sensing, the management of data, data requirements in climatology, the principles of modelling, the input of data into models, and the application of remote sensing to the atmosphere, ice and snow, seas and land. The book is highly topical given the current great public and scientific awareness of possible man-made changes to the climate. It is essential reading for anyone new to the field, and invaluable as a reference work to those already working in it.

Decomposition of Alloys: The Early Stages P. Haasen, V. Gerold, R. Wagner, 2016-07-28 Decomposition of Alloys: The Early Stages contains the proceedings of the 2nd Acta-Scripta Metallurgica Conference held in Sonnenberg, Germany, on September 19-23, 1983. Contributors discuss the early stages of decomposition in alloys, placing emphasis on the unsolved problems of the field, rather than on the solved ones. This book has 36 chapters and opens with a discussion on developments in the theory of the kinetics of first-order phase transitions, followed by an analysis of metastability and spinodal nucleation; neutron scattering during decomposition of aluminum alloys; Ostwald ripening of precipitates; and phase stability under irradiation.

The next chapters explore decomposition processes in Al-Zn alloys; thermal decomposition in Cu-Ni-Fe alloys; and the initial stages of discontinuous precipitation reactions. Other papers focus on the mechanisms of plate precipitate growth; spinodal decomposition and continuous ordering; and early stages of decomposition in Ni-Al single crystals. This monograph will be of interest to students and practitioners of physics and metallurgy.
