Automatic Learning Techniques in Power Systems Louis A. Wehenkel,1998
Automatic learning is a complex, multidisciplinary field of research and development, involving theoretical and applied methods from statistics, computer science, artificial intelligence, biology and psychology. Its applications to engineering problems, such as those encountered in electrical power systems, are therefore challenging, while extremely promising. More and more data have become available, collected from the field by systematic archiving, or generated through computer-based simulation. To handle this explosion of data, automatic learning can be used to provide systematic

approaches, without which the increasing data amounts and computer power would be of little use. Automatic Learning Techniques in Power Systems is dedicated to the practical application of automatic learning to power systems. Power systems to which automatic learning can be applied are screened and the complementary aspects of automatic learning, with respect to analytical methods and numerical simulation, are investigated. This book presents a representative subset of automatic learning methods - basic and more sophisticated ones - available from statistics (both classical and modern), and from artificial intelligence (both hard and soft computing). The text also discusses appropriate methodologies for combining these methods to make the best use of available data in the context of real-life problems. Automatic Learning Techniques in Power Systems is a useful reference source for professionals and researchers developing automatic learning systems in the electrical power field.

Translating Buddhist Medicine in Medieval China C. Pierce Salguero, 2014-07
The transmission of Buddhism from India to China was one of the most

significant cross-cultural exchanges in the premodern world. This cultural encounter involved more than the spread of religious and philosophical knowledge. It influenced many spheres of Chinese life, including the often overlooked field of medicine. Analyzing a wide variety of Chinese Buddhist texts, C. Pierce Salguero examines the reception of Indian medical ideas in medieval China. These texts include translations from Indian languages as well as Chinese compositions completed in the first millennium C.E. Translating Buddhist Medicine in Medieval China illuminates and analyzes the ways Chinese Buddhist writers understood and adapted Indian medical knowledge and healing practices and explained them to local audiences. The book moves beyond considerations of accuracy in translation by exploring the resonances and social logics of intercultural communication in their historical context. Presenting the Chinese reception of Indian medicine as a process of negotiation and adaptation, this innovative and interdisciplinary work provides a dynamic exploration of the medical world of medieval Chinese society. At the center of Salguero's work is an appreciation of the creativity of individual writers as they made sense of disease, health, and the body in the context of regional and transnational traditions. By integrating religious studies, translation studies, and literature with the history of medicine, Translating Buddhist Medicine in Medieval China reconstructs the crucial role of translated Buddhist knowledge in the vibrant medical world of medieval China.
