Classic Period Mixtequilla, Veracruz, Mexico Barbara L. Stark,2001 This archaeological site report presents new in sights on an important but poorly-studied Mesoamerican culture-the Classic period of the Mexican Gulf Coast. Stark discusses her excavations at several sites in the Mixtequilla region, describes the deposits and artifacts encountered, and provides interpretations of the sites and their significance within a wider context. Her analysis of the ephemeral remains of perishable houses is innovative and contains one of the most sophisticated treatments of site formation processes yet carried out in Latin America. Particularly important is the

identification of some of the earliest spindle whorls in Mesoamerica, leading to new views of the importance of cotton textiles in the changing economies of the Late Preclassic and Classic periods. Superb artifact illustrations, detailed descriptions, and an ample use of data tables, make this a valuable reference work. Mesoamericanists will find much of interest in this book, as will readers interested in tropical lowland settlement patterns, household archaeology, and site formation processes.

Serengeti II A. R. E. Sinclair, Peter Arcese, 1995-08 Serengeti II: Dynamics, Management, and Conservation of an Ecosystem brings together twenty years of research by leading scientists to provide the most thorough understanding to date of the spectacular Serengeti-Mara ecosystem in East Africa, home to one of the largest and most diverse populations of animals in the world. Building on the groundwork laid by the classic Serengeti: Dynamics of an Ecosystem, published in 1979 by the University of Chicago Press, this new book integrates studies of the ecosystem at every level—from the plants at the bottom of the visible food chain, to the many species of herbivores and predators, to the system as a whole. Drawing on new data from many long-term studies and from more recent research initiatives, and applying new theory and computer technology, the contributors examine the large-scale processes that have produced the Serengeti's extraordinary biological diversity, as well as the interactions among species and between plants and animals and their environment. They also introduce computer modeling as a tool for exploring these interactions, employing this new technology to test and anticipate the effects of social, political, and economic changes on the entire ecosystem and on particular species, and so to shape future conservation and management strategies.

Applications of Fibonacci Numbers G.E. Bergum, Andreas N. Philippou, Alwyn F. Horadam, 2012-12-06 This book contains 58 papers from among the 68 papers presented at the Fifth International Conference on Fibonacci Numbers and Their Applications which was held at the University of St. Andrews, St. Andrews, Fife, Scotland from July 20 to July 24, 1992. These papers have been selected after a careful review by well known referees in the field, and they range from elementary number theory to probability and statistics. The Fibonacci numbers and recurrence relations are their unifying bond. It is anticipated that this book, like its four predecessors, will be useful to research workers and graduate students interested in the Fibonacci numbers and their applications.
