Report Shanghai Municipal Council for the Year... and Budget for the Year Shanghai Municipal Council, 1926

United States Code United States, 2013 The United States Code is the official codification of the general and permanent laws of the United States of America. The Code was first published in 1926, and a new edition of the code has been published every six years since 1934. The 2012 edition of the Code incorporates laws enacted through the One Hundred Twelfth Congress, Second Session, the last of which was signed by the President on January 15, 2013. It does not include laws of the One Hundred Thirteenth

Congress, First Session, enacted between January 2, 2013, the date it convened, and January 15, 2013. By statutory authority this edition may be cited U.S.C. 2012 ed. As adopted in 1926, the Code established prima facie the general and permanent laws of the United States. The underlying statutes reprinted in the Code remained in effect and controlled over the Code in case of any discrepancy. In 1947, Congress began enacting individual titles of the Code into positive law. When a title is enacted into positive law, the underlying statutes are repealed and the title then becomes legal evidence of the law. Currently, 26 of the 51 titles in the Code have been so enacted. These are identified in the table of titles near the beginning of each volume. The Law Revision Counsel of the House of Representatives continues to prepare legislation pursuant to 2 U.S.C. 285b to enact the remainder of the Code, on a title-by-title basis, into positive law. The 2012 edition of the Code was prepared and published under the supervision of Ralph V. Seep, Law Revision Counsel. Grateful acknowledgment is made of the contributions by all who helped in this work, particularly the staffs of the Office of the Law Revision Counsel and the Government Printing Office--Preface.

Methods in Microbiology ,1979-12-18 Interest in the factors

controlling the spread of pathogenic bacteria in both human and animal populations has led, in recent years, to the development of various techniques for the characterization of isolates from epidemics. These take many forms. Biochemical tests, serological analysis, phage and bacteriocin typing are particularly important. Volumes 10-13 of *Methods in Microbiology* collect together, for the first time, the methods used in identifying all major human and animal pathogenic bacteria of epidemiological importance. The attention to practical detail will enable the methods to be followed in the laboratory, and it is hoped that this will lead to increased uniformity of methods around the world. These volumes will be of value to workers in epidemiology, clinicians working in infectious disease clinics, microbiologists concerned with environmental health and general microbiologists wanting an insight into current thinking and practice concerning the identification of bacteria at the species and sub-species level.
