Longarm 374 Tabor Evans,2009-12-29 Longarm's caught in a desert double cross... When Deputy U.S. Marshal Custis Long trails a gang of murdering outlaws into the desert, the stinging sandstorms are worse than any hail of lead. Amazingly, after one storm blows over, Longarm finds himself in the middle of an abandoned town that was previously hidden under sand. Soon he discovers the town isn't the only thing that was buried. A lovely lady with a treasure chest of her own has braved the elements to find some hidden loot. Funny thing about treasure, though—it draws hard cases like corpses draw buzzards. And as the town becomes repopulated with armed men, the sands of time may be running out for Longarm...

Rhythms of Growth Linda Douty,2014-10-01 In Rhythms of Growth, Linda Douty uses the seasons of the year to illustrate natural trends in our spiritual lives. For winter, she writes about themes of rootedness, fallow times, reflection; for spring—awakening, planting, new growth, storms; for summer—bearing fruit, abundance, blossoming, weeding, and pests; for fall—letting go, sifting, harvesting. Douty's conversational style and ability to bring together the everyday and the holy make this book appealing for anyone who wants a devotional book that is applicable to everyday life.

Reactor Design for Chemical Engineers J. M. Winterbottom,Michael King,2018-04-27 Intended primarily for undergraduate chemical-engineering students, this book also includes material which bridges the gap between undergraduate and graduate requirements. The introduction contains a listing of the principal types of reactors employed in the chemical industry, with diagrams and examples of their use. There is then a brief exploration of the concepts employed in later sections for modelling and sizing reactors, followed by basic information on stoichiometry and thermodynamics, and the kinetics of homogeneous and catalyzed reactions. Subsequent chapters are devoted to reactor sizing and modelling in some simple situations, and more detailed coverage of the design and operation of the principal reactor types.
