comprehensive reference on the field of inverse heat conduction problems (IHCPs), now including advanced topics, numerous practical examples, and downloadable MATLAB codes. The First Edition of the classic book Inverse Heat Conduction: Ill-Posed Problems, published in 1985, has been used as one of the primary references for researchers and professionals working on IHCPs due to its comprehensive scope and dedication to the topic. The Second Edition of the book is a largely revised version of the First Edition with several all-new chapters and significant enhancement of the previous material. Over the past 30 years, the authors of this Second Edition have collaborated on research projects that form the basis for this book, which can serve as an effective textbook for graduate students and as a reliable reference book for professionals. Examples and problems throughout the text reinforce concepts presented. The Second Edition continues emphasis from the First Edition on linear heat conduction problems with revised presentation of Stolz, Function Specification, and Tikhonov Regularization methods, and expands coverage to include Conjugate Gradient Methods and the Singular Value Decomposition method. The Filter Matrix concept is explained and embraced throughout the presentation and allows any of these solution techniques to be represented in a simple explicit linear form. Two direct approaches suitable for non-linear problems, the Adjoint Method and Kalman Filtering, are presented, as well as an adaptation of the Filter Matrix approach applicable to non-linear heat conduction problems. In the Second Edition of Inverse Heat Conduction: Ill-Posed Problems, readers will find: A comprehensive literature review of IHCP applications in various fields of engineering Exact solutions to several fundamental problems for direct heat conduction problems, the concept of the computational analytical solution, and approximate solution methods for discrete time steps using superposition of exact solutions which form the basis for the IHCP solutions in the text IHCP solution methods and comparison of many of these approaches through a common suite of test problems Filter matrix form of IHCP solution methods and discussion of using filter-form Tikhonov regularization for solving complex IHCPs in multi-layer domain with temperature-dependent material properties Methods and criteria for selection of the optimal degree of regularization in solution of IHCPs Application of the filter concept for solving two-dimensional transient IHCP problems with multiple unknown heat fluxes Estimating the heat transfer coefficient,  $h$ , for lumped capacitance body and bodies with temperature gradients Bias in temperature measurements in the IHCP and correcting for temperature measurement bias Inverse

Heat Conduction is a must-have resource on the topic for mechanical, aerospace, chemical, biomedical, or metallurgical engineers who are active in the design and analysis of thermal systems within the fields of manufacturing, aerospace, medical, defense, and instrumentation, as well as researchers in the areas of thermal science and computational heat transfer.

Archaeological Investigations in a Northern Albanian Province: Results of the Projekti Arkeologjik I Shkodrës (PASH) Michael L. Galaty, Lorenc Bejko, 2023-09-12 To date, very few northern Albanian archaeological sites have been surveyed and excavated. Situated beyond the reach, and allure, of the Classical Greek colonies of south-central Albania, the region has drawn less scholarly attention. But in various ways, northern Albania is just as important to the ongoing archaeological debates regarding the origins of inequality and the rise of social complexity. Some of the earliest and largest hill forts and tumuli (burial mounds) in Albania, dating to the Bronze and Iron Age, are located in Shkodër. Shkodër (Rozafa) Castle became the capital of the so-called Illyrian Kingdom, which was conquered by Rome in the early 3rd century BC. This research report, focused on the province of Shkodër, is based on five years of field and laboratory work and is the first synthetic archaeological treatment of this region. The results of the Projekti Arkeologjik i Shkodrës (or PASH) are presented here in two volumes. Volume 1 includes geological context, a literature review, historical background, and reports on the regional survey and test excavations at three settlements and three tumuli. In Volume 2, the authors describe the artifacts recovered through survey and excavation, including chipped stone, small finds, and pottery from the prehistoric, Classical, Roman, medieval, and post-medieval periods. They also present results of faunal, petrographic, chemical, carpological, and strontium isotope analyses of the artifacts. Extensive supporting data is available on the University of Michigan's Deep Blue data repository: <https://doi.org/10.7302/xnpy-0e60> These two volumes place northern Albania--and the Shkodër Province in particular--at the forefront of archaeological research in the Balkans.
