**Non-equilibrium Energy Transformation Processes** Viktor Holubec,2014-05-22  
Various experimental techniques have been advanced in recent years to measure non-equilibrium energy transformations on the microscopic scale of single molecules. In general, the systems studied in the corresponding experiments are exposed to strong thermal fluctuations and thus the relevant energetic variables such as work and heat become stochastic. This thesis addresses challenging theoretical problems in this active field of current research: 1) Exact analytical solutions of work and heat distributions for isothermal non-equilibrium processes in suitable models are obtained; 2) Corresponding

solutions for cyclic processes involving two different heat reservoirs are found; 3) Optimization of periodic driving protocols for such cyclic processes with respect to maximal output power, efficiency and minimal power fluctuations is studied. The exact solutions for work and heat distributions provide a reference for theoretical investigations of more complicated models, giving insight into the structure of the tail of work distributions and serving as valuable test cases for simulations of the underlying stochastic processes.

**Abstract Parabolic Evolution Equations and their Applications** Atsushi Yagi, 2009-11-03 This monograph is intended to present the fundamentals of the theory of abstract parabolic evolution equations and to show how to apply to various nonlinear diffusion equations and systems arising in science. The theory gives us a unified and systematic treatment for concrete nonlinear diffusion models. Three main approaches are known to the abstract parabolic evolution equations, namely, the semigroup methods, the variational methods, and the methods of using operational equations. In order to keep the volume of the monograph in reasonable length, we will focus on the semigroup methods. For other two approaches, see the related references in Bibliography. The semigroup methods, which go back to the invention of the analytic semigroups in the middle of the last century, are characterized by precise formulas representing the solutions of the Cauchy problem for evolution equations. The analytic semigroup generated by a linear operator  $A$  provides directly a fundamental solution to the Cauchy problem for an autonomous linear evolution equation,  $U_t + AU = F(t)$ ,  $U(0) = 0$

**British Parliamentary Election Results 1983-1997** Colin Rallings, Michael Thrasher, 2019-05-23 First published in 1999, this is the sixth volume in a series of definitive reference books recording constituency election results. This volume gives the 1983, 1987 and 1992 general election results in each constituency as well as the outcome of any by-elections which took place up until the dissolution of parliament in 1997. The name, party label, votes and vote share for each candidate are shown. The change in party vote share between elections helps chart the ebb and flow of electoral opinion throughout this period. Each constituency result also lists the electorate and turnout for each election as well as showing the winner's majority, both in terms of votes and percentage lead over the second placed candidate. Summary statistics for the three general elections record votes cast and seats won across the nations of the United Kingdom. A comprehensive index will allow the reader to identify which candidates fought which constituency in their efforts to be elected to the House of Commons.
