*Frequency and the Emergence of Linguistic Structure* Joan L. Bybee,Paul Hopper,2001-01-01 A mainstay of functional linguistics has been the claim that linguistic elements and patterns that are frequently used in discourse become conventionalized as grammar. This book addresses the two issues that are basic to this claim: first, the question of what types of elements are frequently used in discourse and second, the question of how frequency of use affects cognitive representations. Reporting on evidence from natural conversation, diachronic change, variability, child language acquisition and psycholinguistic experimentation the original articles in this book support two major principles. First, the content of people s interactions consists of a preponderance of subjective, evaluative statements, dominated by the use of pronouns, copulas and intransitive clauses. Second, the frequency with which certain items and strings of items are used has a profound influence on the way language is broken up into chunks in memory storage, the way such chunks are related to other stored material and the ease with which they are accessed to produce new utterances.

Elementary Feedback Stabilization of the Linear Reaction-Convection-Diffusion Equation and the Wave Equation Weijiu Liu,2009-12-01 Unlike abstract approaches to advanced control theory, this volume presents key concepts through concrete examples. Once the basic fundamentals are established, readers can apply them to solve other control problems of partial differential equations.

**The Araceae of Peninsular Malaysia (Penerbit USM)** Mashhor Mansor, Peter C. Boyce,Ahmad Sofiman Othman, Baharuddin Sulaiman, A review of the Araceae of Peninsular Malaysia, including its off-shore islands, is presented as a precursor to revising the family for the Flora of Peninsular Malaysia project. The aroid flora of Peninsular Malaysia comprises 28 genera and ca 140 indigenous (of which17 provisionally accepted) with 25 species (ca 17%) endemic. Peninsular Malaysia has no endemic aroid genera. As compared to Thailand with 29 genera, ca 200 species of which 62 species (ca 30%) are endemic, and Borneo where 38 genera (of which are 10 endemic), and currently 670 indigenous species of which more than 40% are undescribed and about 95% are endemic. An historical review of Araceae research in Peninsular Malaysia, and keys to higher taxa are provided. Most genera are illustrated. Universiti Sains Malaysia, Penerbit Universiti Sains Malaysia

*Konjac Glucomannan* George Srzednicki,Chaleeda Borompichaichartkul,2020-06-09 In

recent years, konjac glucomannan (KGM) has attracted growing attention as a dietary fibre. It is a neutral hydrocolloid with significant health functions. Although relatively little known in the Western world, it has been part of the human diet in China and Japan for nearly two thousand years. Initially, the main source of KGM was *Amorphophallus konjac* from which the common English name 'konjac' is derived. Nowadays, the production of KGM is expanding into SE Asia and more tropical species of *Amorphophallus* are used as a raw material. *Konjac Glucomannan: Production, Processing, and Functional Applications* deals with a wide range of aspects related with the production of KGM, including the taxonomy of the genus *Amorphophallus* with a focus on edible species, their physiology, ecology and field production. Other sections of the book discuss the postharvest processing and physico-chemical properties of KGM. A considerable portion is dedicated to the applications of KGM in functional foods, food additives and their derivatives and in medicine. In addition, *Konjac Glucomannan* describes the current status of the KGM industry and the research done by industrial and scientific institutions in the major producing countries. *Key Features* Provides thorough information about taxonomy and ecology of KGM producing *Amorphophallus* species Describes commercial production of *Amorphophallus* sp. in the field and the forest Describes advanced industrial extraction techniques of KGM Reviews the major applications of KGM nutritional (anti-obesity, regulation in lipid metabolism, prebiotic) and biomedical fields At present, KGM has wide applications in the food industry as a gelling agent, stabiliser and emulsifier and is used for edible coatings for preservation of fruit and vegetables. Other uses are in pharmaceutical industry for microencapsulation of active compounds that are to be released 'on demand' for treatment of various diseases. This book is aimed at researchers in academia and industry, and will appeal to professionals from a wide variety of industries including food scientists & engineers, botanists, agronomists, nutritionists, health care professionals, pharmaceutical industry professionals.

**Motors Meet Their Cargo** Dina Finan, 2011 Molecular motors are proteins that use energy from ATP hydrolysis to walk along cytoskeletal tracks, often transporting cargo as they move. A substantial amount of work has been done to study their catalytic domains, obtaining in vitro biochemical, structural, and biophysical measurements of motors' stepping behavior. Compared to this wealth of data, much less is known about how they actually work in cells. Regions of the motor proteins called cargo-binding domains are responsible for mediating their interactions with other molecules, but we know relatively little about what specific cargoes they associate with, the biochemical basis of these interactions, how they are regulated, and thus the precise functions of the motors in vivo. We have focused on two unconventional myosin motors in *Drosophila*, V and VI, both of which play important roles in fly development, and whose cargo-binding domains have been relatively unexplored. We use a proteomics approach to identify multiple novel binding partners for both myosins. The identities and biochemical characterization of a small fraction of the candidate binding proteins have begun to shed light on pathways in which the motors are likely to be involved. We have focused on roles for myosin VI in protein secretion and intracellular trafficking, and it seems likely that myosin V will play distinct roles in trafficking of ribonucleoprotein complexes. The discovery of binding partners is an important step towards understanding what motors do in cells, and we expect that this method will be useful for other motors in the future. We also hope that

these findings will continue to elucidate biological roles of myosin V and VI.
