International Arbitration in Sweden Annette Magnusson,Jakob Ragnwaldh,Martin Wallin,2021-03-09 Sweden is one of a handful of countries where the international arbitral process has reached a stage where the jurisprudence is replete with instances involving no local parties at all. In this context of credible neutrality, the Arbitration Institute of the Stockholm Chamber of Commerce (SCC) has emerged as a leading global arbitral institution. Whether the matter at issue is a business transaction dispute or a politicized conflict involving obdurate parties, the richness of its body of decided cases manifests the SCC’s authority and reliability throughout the converging world of international arbitration. The present book, written by sixteen eminent practitioners and now in its second edition, provides a practical guide to international arbitration in Sweden, whether ad hoc or institutional. Among the many elements of practice and procedure detailed are the following: appointment, challenge, removal, and compensation of arbitrators; procedural efficiency and costs; use of international legal sources such as IBA guidelines; choice of law by parties; SCC rules and procedures; multiparty arbitrations – joinder, intervention, consolidation; investment treaty arbitration; confidentiality; documentary evidence, witnesses, and experts; grounds for setting aside; party succession; Swedish court review of the arbitrator’s jurisdiction; and appeal of arbitrators’ compensation. In addition, readers will be exposed to a trove of pertinent references to important decisions that have, in recent decades, been generated by the stream of major international arbitrations conducted in Sweden. Disputing parties wishing to know what will happen when their case is brought to Sweden for arbitration will find no clearer or more thorough guide. This book is an incomparable source for anyone called upon to act as arbitrator or counsel, or in any other capacity, in international arbitration in Sweden.

Western Europe, North America and Australasia Rolf Bohme,2013-10-22 Topographic mapping plays a basic and important role within the extensive field of cartography. In recent years, this type of mapping has become somewhat neglected and available literature is normally restricted to details concerning the programmes of individual countries, often presented in the form of monographs. Topographic maps are essential tools for use in development projects, resource exploitation, the planning of construction, infrastructure and recreation. Furthermore, they give a detailed illustration of the relative degrees of development of areas within a landscape and are thus unique in demonstrating the cultural status of a country. This book is the first of three volumes and provides an introduction to world topographic mapping giving details and examples of topographic maps from Western Europe, North America and Australasia. The information supplied for each country consists of a text, including a brief history of the development of topographic mapping, geodetic data, map scales and series, as well as extracts of maps and index sheets illustrating the present status of map coverage within that country. There is currently no other work employing the approach adopted in assembling this ‘inventory’. This work is a comprehensive and important reference and source book for information in the field of topographic mapping.
