The Structural Representation of Proximity Matrices with MATLAB Lawrence Hubert,Phipps Arabie,Jacqueline Meulman,2006-03-01 The Structural Representation of Proximity Matrices with MATLAB presents and demonstrates the use of functions (by way of M-files) within a MATLAB computational environment to effect a variety of structural representations for the proximity information that is assumed to be available on a set of objects. The representations included in the book have been developed primarily in the behavioral sciences and applied statistical literature (e.g., in psychometrics and classification), although interest in these topics now extends more widely to such fields as bioinformatics and chemometrics. Throughout the book, two kinds of proximity information are analyzed: one-mode and two-mode. One-mode proximity data are defined between the objects from a single set and are usually given in the form of a square symmetric matrix; two-mode proximity data are defined between the objects from two distinct sets and are given in the form of a rectangular matrix. In addition, there is typically the flexibility to allow the additive fitting of multiple structures to either the given one- or two-mode proximity information.

Tracking Control of Linear Systems Lyubomir T. Gruyitch,2018-10-03 The primary purpose of control is to force desired behavior in an unpredictable environment, under the actions of unknown, possibly unmeasurable disturbances and unpredictable, and therefore probably nonzero, initial conditions. This means that tracking and tracking control synthesis are fundamental control issues. Surprisingly, however, tracking theory has not been well developed, and stability theory has dominated. Tracking Control of Linear Systems presents the fundamentals of tracking theory for control systems. The book introduces the full transfer function matrix $F(s)$, which substantially changes the theory of linear dynamical and control systems and enables a novel synthesis of tracking control that works more effectively in real environments. An Introduction to the New Fundamentals of the Theory of Linear Control Systems The book begins by re-examining classic linear control systems theory. It then defines and determines the system full (complete) transfer function matrix $F(s)$ for two classes of systems: input-output (IO) control systems and input-state-output (ISO) control systems. The book also discusses the fundamentals of tracking and trackability. It presents new Lyapunov tracking control algorithms and natural tracking control (NTC) algorithms, which ensure the quality of the tracking under arbitrary disturbances and initial conditions. This natural tracking control is robust, adaptable, and simple to implement. Advances in Linear Control Systems Theory: Tracking and Trackability This book familiarizes readers with novel, sophisticated approaches and methods for tracking control design in real conditions. Contributing to the advancement of linear control systems theory, this work opens new directions for research in time-invariant continuous-time linear control systems. It builds on previous works in the field, extending treatment o

The Global Lives of German Migrants Marcel Erlinghagen,Andreas Ette,Norbert F. Schneider,Nils Witte,2021 Based on the German case, this open access book highlights the increasing flows of migration and the internationalisation of individual life courses. It analyses the experiences of migration across four central domains - employment and income, partners and families, health and wellbeing, as well as friends and social participation - which potentially have far-reaching consequences for social inequalities and life chances. The book showcases results from an innovative probability sample that is representative of German emigrants who recently moved abroad and remigrants who recently returned from abroad and compares their international experiences with the sedentary population in Germany. Stays abroad, whether temporary or permanently, have become the new normal for increasing numbers of people from highly developed welfare states. Unnoticed from mainstream migration studies, these countries are today not only major immigration countries but also important sources of international mobility. By providing an empirically founded prism of the global lives of German migrants, this book is a valuable resource for students and researchers of migration, social inequality, and the life course and provides practitioners with insights into these regularly overlooked aspects of international migration.

From Stimulus to Behavioral Decision-Making Gérard Manière,Gérard Coureaud,2020-02-13 The proper detection of stimuli coming from the environment is vital for any organism, in vertebrates as in invertebrates. Animals use different sensory modalities, independently or simultaneously, to detect them, such as audition, vision, olfaction, taste and touch. Indeed, in their ecosystems, animals constantly perceive various sensory signals. These stimuli come either from the environment (light, temperature, humidity, salinity...), or from other organisms (calls, colors, movements, pheromones, allomones, ...). This eBooks combines studies and comments (research articles, reviews, opinions ...), dealing with how animals detect a precise simple or complex sensory signal, confer a value to that signal, and respond to it by devoted and adaptive behaviors. This eBook provides a general overview for the detection of identified stimuli, and the mechanisms that lead to decision-making in animals. It also highlights the differences and similarities that may exist between vertebrates and invertebrates.
