**A Growing Nation** Robert A. Miles,2013-08-08 This book, that has been 22 years in the making, is the first printing of the R.A. Miles Collection of the Southwest History from 1831 to 1889. It's in chronological order by events and dates, and is a true and revealing account of the American history of the Southwest. It is an impartial, sometimes disconcerting, portrayal of the expanding United States westward. History is not always pleasant, but that is how it transpired sometimes in those years, and this book recounts both favorable and adverse events that need to be told. This country was expanding! It was growing; there were many heroes, many battles and many tragedies in the expansion of this country. It was like a glass of water sitting in the frigid cold. It froze and began to expand, the expansion could not be stopped, soon the glass burst. The final results were predictable and inevitable. The expansion couldn't go east because of an ocean, it could only go west to the other ocean, and that it did. This collection is about the events that transpired during the mid to late 1800's as a direct result of that westward growth. I have traveled these mountains for 7 of the 22 years in researching this book, from El Paso, Texas through Silver City, Lordsburg, Las Cruces and Stein, New Mexico and into Apache Pass in Arizona. I've explored Carlisle Canyon and drank the water at Goat Camp spring in Goat; journeyed through Camp Canyon, Hells Canyon, Steeple Rock Canyon, Red Rock, Crookson Peak and more. I have followed the trails of the old Butterfield Stage Line and found an old stage way station. I have found and taken pictures of over 150 old gold and silver mines and listed their histories, and listened to stories from an old miner as old as I am. What is most important, is I enjoyed every minute of it... Robert A. Miles

**Nonnegative Matrices in the Mathematical Sciences** Abraham Berman,Robert J. Plemmons,1994-01-01 Here is a valuable text and research tool for scientists and engineers who use or work with theory and computation associated with practical problems relating to Markov chains and queuing networks, economic analysis, or mathematical programming. Originally published in 1979, this new edition adds material that updates the subject relative to developments from 1979 to 1993. Theory and applications of nonnegative matrices are blended here, and extensive references are included in each area. You will be led from the theory of positive operators via the Perron-Frobenius theory of nonnegative matrices and the theory of inverse positivity, to the widely used topic of M-matrices. On the way, semigroups of nonnegative matrices and symmetric nonnegative matrices are discussed. Later, applications of nonnegativity and M-matrices are given; for numerical analysis the example is convergence theory of iterative methods, for probability and statistics the examples are finite Markov chains and queuing network models, for mathematical economics the example is input-output models, and for mathematical programming the example is the linear complementarity problem. Nonnegativity constraints arise very naturally throughout the physical world. Engineers, applied mathematicians, and scientists who encounter nonnegativity or generalizations of nonnegativity in their work will benefit from topics covered here, connecting them to relevant theory. Researchers in one area, such as queuing theory, may find useful the techniques involving nonnegative matrices used by researchers in another area, say, mathematical programming. Exercises and biographical notes are included with each chapter.
