**Truncated Predictor Feedback for Time-Delay Systems** Bin Zhou, 2014-05-29  
This book provides a systematic approach to the design of predictor based  
controllers for (time-varying) linear systems with either (time-varying)  
input or state delays. Differently from those traditional predictor based  
controllers, which are infinite-dimensional static feedback laws and may  
cause difficulties in their practical implementation, this book develops a  
truncated predictor feedback (TPF) which involves only finite dimensional  
static state feedback. Features and topics: A novel approach referred to as  
truncated predictor feedback for the stabilization of (time-varying) time-  
delay systems in both the continuous-time setting and the discrete-time  
setting is built systematically Semi-global and global stabilization problems  
of linear time-delay systems subject to either magnitude saturation or energy  
constraints are solved in a systematic manner Both stabilization of a single  
system and consensus of a group of systems (multi-agent systems) are treated  
in a unified manner by applying the truncated predictor feedback and  
predictor feedback The properties of the solutions to a class of parametric  
(differential and difference) Lyapunov matrix equations are presented in  
detail Detailed numerical examples and applications to the spacecraft  
rendezvous and formation flying problems are provided to demonstrate the  
usefulness of the presented theoretical results This book can be a useful  
resource for the researchers, engineers, and graduate students in the fields  
of control, applied mathematics, mechanical engineering, electrical  
engineering, and aerospace engineering.

He presents such subjects as statistical mechanics, quantum field theory and their interrelation, continuous global symmetry, non-Abelian gauge fields, instantons and the quantam theory of loops, and quantum strings and random surfaces.
