Worldwide Guide to Equivalent Nonferrous Metals and Alloys Fran Cverna,2001-01-01 This latest edition incorporates the many changes in the specifications and designations of nonferrous alloys that have occurred over the past five years. The volume features over 20,000 alloy designations, including a complete listing of UNS designations for nonferrous alloys and comprehensive treatment of current European and Japanese standards. It covers more countries, more alloys, and more standards than previous editions, while keeping obsolete designations for those persons trying to duplicate equipment from old documents. This comprehensive volume is well-indexed with easy-to-use cross references that make short work of looking up equivalents for a material specification or designation. It provides valuable composition tables that allow you to compare similar alloys. Tensile properties and product forms are provided when available.
