Inverse Problems of Wave Processes Ation A. S. Blagoveščenskij,2001 This volume in the Inverse and Ill-Posed Problems Series studies dynamical inverse problems, i.e. such problems whose data are the values of wave fields. The monograph deals with the problem of determination of one or more coefficients of a hyperbolic equation or a system of hyperbolic equations. The desired coefficients are functions of point. Most attention is given to the case where the required functions depend only on one coordinate. The first chapter of the book deals mainly with methods of solution of one-dimensional inverse problems. The second chapter focuses on scalar inverse problems of wave propagation in a layered medium. In the final chapter inverse problems for elasticity equations in stratified media and acoustic equations for moving media are given.This monograph will be of value and interest to researchers in the fields of mathematical physics, geophysics, acoustics, elasticity theory, and electrodynamics.

Dynamic Systems with Time Delays: Stability and Control Ju H. Park,Tae H. Lee,Yajuan Liu,Jun Chen,2019-08-29

This book presents up-to-date research developments and novel methodologies to solve various stability and control problems of dynamic systems with time delays. First, it provides the new introduction of integral and summation inequalities for stability analysis of nominal time-delay systems in continuous and discrete time domain, and presents corresponding stability conditions for the nominal system and an applicable nonlinear system. Next, it investigates several control problems for dynamic systems with delays including H(infinity) control problem Event-triggered control problems; Dynamic output feedback control problems; Reliable sampled-data control problems. Finally, some application topics covering filtering, state estimation, and synchronization are considered. The book will be a valuable resource and guide for graduate students, scientists, and engineers in the system sciences and control communities.
