The Ebro River Basin Damià Barceló,Mira
Petrovic,2011-01-05 The Ebro is a typical
Mediterranean river characterized by seasonal low
flows and extreme flush effects, with important
agricultural and industrial activity that has
caused heavy contamination problems. This volume
deals with soil-sediment-groundwater related
issues in the Ebro river basin and summarizes the

results generated within the European Union-funded project AquaTerra. The following topics are highlighted: Hydrology and sediment transport and their alterations due to climate change, aquatic and riparian biodiversity in the Ebro watershed, occurrence and distribution of a wide range of priority and emerging contaminants, effects of chemical pollution on biota and integration of climate change scenarios with several aspects of the Ebro's hydrology and potential impacts of climate change on pollution. The primary objective of the book is to lay the foundation for a better understanding of the behavior of environmental pollutants and their fluxes with respect to climate and land use changes.
