Annual Report of the City Comptroller of the City of Seattle Seattle (Wash.). Comptroller's Office,1902

Brilliant Corners Chris Sheridan,2001-04-30 In this masterful compilation, world-recognized discographer Chris Sheridan draws together the most comprehensive reconstruction of Thelonious Monk's performances and recordings. Woven through the chronological listing of Monk's work is the story of his rise to acceptance as one of the key pianists and composers of jazz and his decline in health and popularity to his death in 1982. Following a Prologue which attempts to summarize the career and man, the narrative discography covers Monk's entire performance career. This is followed by appendixes listing all microgroove and post-microgroove issues of Monk's performances, all known commercially produced films and videos in which Monk took part, a listing of all of his engagements from 1944 until his career petered out in the mid-1970s, and a bibliography. The work concludes with an index of the people, places, producers, and radio and television programs referred to or quoted in the main text, a listing of all musicians, vocalists, and broadcast presenters who took part in the recordings or who played in Monk's bands, an index of all the titles used for Monk's tunes by other musicians and vocalists, and a listing of all tunes played, together with their composers and, where relevant, lyricists. A comprehensive reference work for all scholars and other researchers involved with jazz from the 1940s onward.

Food Preservation Process Design Dennis R. Heldman,2011-03-14 The preservation processes for foods have evolved over several centuries, but recent attention to non-thermal technologies suggests that a new dimension of change has been initiated. The new dimension to be emphasized is the emerging technologies for preservation of foods and the need for sound base of information to be developed as inputs for systematic process design. The focus of the work is on process design, and emphasizes the need for quantitative information as inputs to process design. The concepts presented build on the successful history of thermal processing of foods and use many examples from these types of preservation processes. Preservation of foods by refrigeration, freezing, concentration and dehydration are not addressed directly, but many of the concepts to be presented would apply. Significant attention is given to the fate of food quality attributes during the preservation process and the concept of optimizing process parameters to maximize the retention of food quality.
