Shell Structures: Theory and Applications Volume 4 Wojciech Pietraszkiewicz, Wojciech Witkowski, 2017-10-30 Shells are basic structural elements of modern technology and everyday life. Examples of shell structures in technology include automobile bodies, water and oil tanks, pipelines, silos, wind turbine towers, and nanotubes. Nature is full of living shells such as leaves of trees, blooming flowers, seashells, cell membranes or wings of insects. In the human body arteries, the eye shell, the diaphragm, the skin and the pericardium are all shells as well. Shell Structures: Theory and Applications, Volume 4 contains 132 contributions presented at the 11th Conference on Shell Structures: Theory and Applications (Gdansk, Poland, 11-13 October 2017). The papers reflect a wide spectrum of scientific and engineering problems from theoretical modelling through strength, stability and dynamic behaviour, numerical analyses, biomechanic applications up to

engineering design of shell structures. *Shell Structures: Theory and Applications*, Volume 4 will be of interest to academics, researchers, designers and engineers dealing with modelling and analyses of shell structures. It may also provide supplementary reading to graduate students in Civil, Mechanical, Naval and Aerospace Engineering.

Against Islamophobia Arno Tausch, 2007 In this book, the author presents optimistic, socio-liberal conclusions about Islam in the world system. Countering some alarmist voices in the West, neither migration nor Muslim culture are to be blamed for the contemporary crisis, but the very nature of unequal capitalist accumulation and dependency that is at the core of the world capitalist system. For one, the analysis is based on current thinking on Kondratiev waves of world political development inherent in recent work by IIASA and the NATO Institute for Advanced Studies. Analyses are also presented on the framework of the debate on cross-national determinants of human well-being in the world system. While the author is cautiously optimistic about a socio-liberal, non-interventionist policy alternative, he has come to the conclusion that present patterns of global governance, modeled around the neo-liberal Washington Consensus and American hyperpower, are doomed for failure. A new, socio-liberal global consensus on global migration, global order and global governance could emerge instead.
