**Political Communication in Canada** Alex Marland,Thierry Giasson,Tamara A. Small,2014-09-21 Changes in technology and media consumption are transforming the way people communicate about politics. Are they also changing the way politicians communicate to the public? Political Communication in Canada examines the way political parties, politicians, interest groups, the media, and citizens are using new tactics, tools, and channels to disseminate information, and also investigates the implications of these changes. Drawing on the most recent data, contributors to this volume illustrate shifts in political communication, from the brand-image management of political parties and the prime minister, to the evolving role of political journalists.

*Time Series* David R. Brillinger,1981-01-01 Intended for students and researchers, this text employs basic techniques of univariate and multivariate statistics for the analysis of time series and signals. It provides a broad collection of theorems, placing the techniques on firm theoretical ground. The techniques, which are illustrated by data analyses, are discussed in both a heuristic and a formal manner, making the book useful for both the applied and the theoretical worker. An extensive set of original exercises is included. Time Series: Data Analysis and Theory takes the Fourier transform of a stretch of time series data

as the basic quantity to work with and shows the power of that approach. It considers second- and higher-order parameters and estimates them equally, thereby handling non-Gaussian series and nonlinear systems directly. The included proofs, which are generally short, are based on cumulants. Audience: this book will be most useful to applied mathematicians, communication engineers, signal processors, statisticians, and time series researchers, both applied and theoretical. Readers should have some background in complex function theory and matrix algebra and should have successfully completed the equivalent of an upper division course in statistics.
