Rabies William H. Wunner,Alan C. Jackson,2010-07-26 Rabies is the most current and comprehensive account of one of the oldest diseases known that remains a significant public health threat despite the efforts of many who have endeavored to control it in wildlife and domestic animals. During the past five years since publication of the first edition there have been new developments in many areas on the rabies landscape. This edition takes on a more global perspective with many new authors offering fresh outlooks on each topic. Clinical features of rabies in humans and animals are discussed as well as basic science aspects, molecular biology, pathology, and pathogenesis of this disease. Current methods used in defining geographic origins and animal species infected in wildlife are presented, along with diagnostic methods for identifying the strain of virus based on its genomic sequence and antigenic structure. This multidisciplinary account is essential for clinicians as well as public health advisors, epidemiologists, wildlife biologists, and research scientists wanting to know more about the virus and the disease it causes. * Offers a unique global perspective on rabies where dog rabies is responsible for killing more people than yellow fever, dengue fever, or Japanese encephalitis * More than 7 million people are potentially exposed to the virus annually and about 50,000 people, half of them children, die of rabies each year * New edition includes greatly expanded coverage of bat rabies which is now the most prominent source of human rabies in the New World and Western Europe, where dog rabies has been controlled * Recent successes of controlling wildlife rabies with an emphasis on prevention is discussed * Approximately 40% updated material incorporates recent knowledge on new approaches to therapy of human rabies as well as issues involving organ and tissue transplantation * Includes an increase in illustrations to more accurately represent this diseases' unique horror

The Place of Narrative Marilyn Aronberg Lavin,1990-12-15 Looking at more than two hundred Italian medieval and Renaissance mural cycles, Lavin examines—with the aid of computer technology—the rearranged chronologies of familiar religious stories found therein. Like many masterpieces, Lavin's book builds upon a simple idea . . . it is possible to do a computer analysis of . . . visual narratives. . . . This is the first computer-based study of the visual arts of which I am aware that illustrates how those technologies can utterly transform the study of old master art. An extremely important book, one likely to become the most influential recent study of art of this period, The Place of Narrative is also a beautiful artifact.—David Carrier, Leonardo Covering over a millennium and dealing with the whole of Italy, Lavin makes pioneering use of new methodology employing a computer database . . . [and] novel terminology to describe the disposition of scenes of church and chapel walls. . . . We should recognize this as a book of high seriousness which reaches out into new areas and which will fruitfully stimulate much thought on a neglected subject of very considerable significance.—Julian Gardner, Burlington Magazine

The Cultural Life of Machine Learning Jonathan Roberge,Michael Castelle,2020-11-30 This book brings together the work of historians and

sociologists with perspectives from media studies, communication studies, cultural studies, and information studies to address the origins, practices, and possible futures of contemporary machine learning. From its foundations in 1950s and 1960s pattern recognition and neural network research to the modern-day social and technological dramas of DeepMind's AlphaGo, predictive political forecasting, and the governmentality of extractive logistics, machine learning has become controversial precisely because of its increased embeddedness and agency in our everyday lives. How can we disentangle the history of machine learning from conventional histories of artificial intelligence? How can machinic agents' capacity for novelty be theorized? Can reform initiatives for fairness and equity in AI and machine learning be realized, or are they doomed to cooptation and failure? And just what kind of "learning" does machine learning truly represent? We empirically address these questions and more to provide a baseline for future research.
