Scenario-based impact assessment of global and regional change on the semi-natural flow regime Mikołaj

Piniewski,2014-12 Globally, freshwater ecosystems are considered to be under severe threat from human pressure and climate change (Vörösmarty et al., 2010). Malmqvist and Rundle (2002) suggest that running water is the most impacted upon ecosystem on Earth due to being surrounded by dense human settlements and exploited for domestic and industrial water supply, irrigation, electricity generation and waste disposal. For example, the progressive over-exploitation of surface water resources for irrigation and urban uses in the Colorado River Basin has resulted most years in no runoff reaching the river's delta (Gleick, 2003). [...] Hereafter, natural and anthropogenic driving forces will be referred to as global and regional driving forces, respectively. The future effects of these forces up to the 2050s will be assessed in quantitative scenarios implemented in a hydrological model. It is believed that using this nomenclature (i.e. global and regional instead of natural and anthropogenic) better reflects considered environmental stressors, since global-scale driving forces will include not only climatic change but also changes in CO₂, atmospheric carbon dioxide and plant physiological parameters, whereas regional-scale driving forces will include changes in land use, agriculture development and agricultural water management. Hence, the difference is that the first group of driving forces acts globally and independently on the study area, whereas the second group includes factors that are specific to the study area. Furthermore, in order to expand on the title of this thesis, impacts in the present study will be assessed not only on the flow regime as such, but also on its ecological functions, i.e. on the environmental flow regime. This is motivated mainly by the semi-natural character of the study area, that is unique in Poland and in Europe, but it also underlines the novelty of this thesis, as going beyond the pure impacts on the flow regime in a scenario-modelling framework is rare in hydrological science, if achieved at all.

Modeling and Control in Air-conditioning Systems Ye Yao,Yuebin Yu,2016-10-01 This book investigates the latest modeling and control technologies in the context of air-conditioning systems. Firstly, it introduces the state-space method for developing dynamic models of all components in a central air-conditioning system. The models are primarily nonlinear and based on the fundamental principle of energy and mass conservation, and are transformed into state-space form through linearization. The book goes on to describe and discuss the state-space models with the help of graph theory and the structure-matrix theory. Subsequently, virtual sensor calibration and virtual sensing methods (which are very useful for real system control) are illustrated together with a case study. Model-based predictive control and state-space feedback control are applied to air-conditioning systems to yield better local control, while the air-side synergic control scheme and a global optimization strategy based on the decomposition-coordination method are developed so as to achieve energy conservation in the central air-conditioning system. Lastly, control strategies for VAV systems including total air volume control and trim & response static pressure control are investigated in practice.

Princess Celesti 4 River Star,2022-04-04 This is 18+ because of the steamy and spicy reverse harem MFM scenes. She's grieving and nursing deep wounds, yearning for the healing power of love, but all she finds are echoes of false hope. Meanwhile, Chul lies in a coma, his consciousness suspended after brain surgery to remove his cybernetic enhancements. Arew, on the other hand, embarks on a dangerous journey through time, clutching a bag of stolen treasure that holds the potential to lift his mother and sisters from the clutches of poverty. In this final book of the Princess Celesti series, loyalties are tested, identities are shattered, and destinies hang in the balance. As they grapple with their own individual trials, the fate of their shared universe teeters on the edge of uncertainty.

But fate takes a cruel twist when three ruthless abductors snatch her away from the comforts of her palace. Among them is a doctor, a hulking figure with dreadlocks and a nose ring, who both intrigues and terrifies her with his imposing presence.
