Environmental Change in South-East Asia Raymond Bryant, Michael Parnwell, 2005-08-03 Environmental Change in South-East Asia brings together scholars, journalists, consultants and NGO activists to explore the interaction of people, politics and ecology. Ostensibly green activities - plantation forestry, eco-tourism, hydro-electricity - are revealed as guises used by elites to promote their own political and economic interests. Highlighting fatal flaws in presently exclusive economic and ecological approaches, the authors stress that neither the quest for sustainable development nor the process of environmental change itself can be understood without reference to political processes.

**„Sieg oder Tod!“** M. D. Schuster, 2014-07-15 „Ihr habt uns alles genommen, was uns wert war. Ihr habt uns Lasten aufgebürdet, die uns in die Knie sinken ließen. Ihr habt uns gezwungen zu verleugnen, wer wir sind. Diese Zeit ist nun vorüber! Wir sind stark geworden, um dem Joch zu entwachsen. Unsere Liebe zu euch haben wir nicht verloren. Aber wir haben verstanden, dass Liebe allein nicht vor Verrat schützt. Wenn ihr nicht ebenfalls erstarrt, werdet ihr uns nichts mehr zu bieten haben.“ Gesang der Leyawi

**Blockchains** Anwer Al-Dulaimi, Octavia A. Dobre, Chih-Lin I, 2023-10-03 Blockchains Empowering Technologies and Industrial Applications A comprehensive guide to the most recent developments in blockchains in theoretical and industrial perspectives Originally introduced as a method to keep track of Bitcoin transactions over a peer-to-peer network, blockchain is a continuously growing list of records, called blocks, which are linked and secured using cryptography into a chain held in public databases. The use of this technology has grown since its cryptocurrency creation and now store three types of information: 1) transactions, including the date, time, and value of purchases; 2) records of participates in transactions; and 3) unique code known as a “hash” that distinguishes one block from another. A single block on the blockchain can hold 1 MB of data, or potentially thousands of transactions – this then can allow for hundreds of thousands of transactions to be recorded as each block can join the state-of-the-art blockchain. Blockchains provides a detailed overview of the latest and most innovative concepts, techniques, and applications related to the developing blockchain. Aimed at novices and experts on the subject, the book focuses on blockchain technologies, integrated systems, and use cases, specifically by looking at three major technical areas: blockchain platforms and distributed database technologies, consensus and fault tolerance, and Blockchain as a Service (BaaS). These avenues of research are essential to support blockchain functionalities, such as acquiring and updating existing data, securing data resources and the recovery of failures, and using blockchains in various services that range from cryptocurrencies to cloud automation. Blockchains readers will also find: Brainstorming activities that gradually builds the knowledge of readers on the described technology and deployment scenarios Investigation of specific topics such as novel networking protocols, wireless techniques, new infrastructure designs, operations management, and deployment strategies Discussion of technical challenges in blockchain, as well as how to manage cloud-based networks, service automation, and cyber security Numerous elementary and advanced examples on various topics at the end of the book that can be used for training purposes Illustrations including tables and diagrams to help elucidate points made throughout the volume Glossary of relevant terminology to blockchains in enterprise Blockchains is a useful reference for researchers in vehicular networking and computer science, as well as cloud storage providers and governmental offices for data management.

*China's Rise in the World ICT Industry* Lutao Ning,2009-06-04 One of the most striking phenomena of China's remarkable economic growth is that its huge volume of exports are becoming high-tech. China is now the world's largest Information and Communication Technology (ICT) exporter, having overtaken Japan and the European Union in 2003 and the United States in 2004. China's ICT industry is also the largest manufacturing sector within the Chinese economy. This book examines how China has attained this leading position and presents one of the first accounts of China's ICT development model with specific reference to the experiences of East Asian 'tigers'. It shows how the development of the industry was military-driven before 1978, and how subsequently Chinese policymakers, struggling with domestic market reform and challenged by trade liberalisation and globalisation, managed to push through ICT development strategies. Overall, it discusses the debates between policymakers as to the most appropriate economic development strategy for 'catching-up' and demonstrates how China moved away from the across-the-board protectionist and interventionist industrial policies pursued by many developing countries, but has not wholeheartedly followed the neo-liberal free trade and market policies favoured by the World Bank, WTO and IMF. By doing so, it sheds light on the limitations of China's strategies moving forward, and identifies policy lessons for other developing countries.
