Complex Analysis Prem K. Kythe,2016-04-19 Complex Analysis: Conformal Inequalities and the Bieberbach Conjecture discusses the mathematical analysis created around the Bieberbach conjecture, which is responsible for the development of many beautiful aspects of complex analysis, especially in the geometric-function theory of univalent functions. Assuming basic knowledge of complex analysis and differential equations, the book is suitable for graduate students engaged in analytical research on the topics and researchers working on related areas of complex analysis in one or more complex variables. The author first reviews the theory of analytic functions, univalent functions, and conformal mapping before covering various theorems related to the area principle and discussing Löwner theory. He then presents Schiffer's variation method, the bounds for the fourth and higher-order coefficients, various subclasses of univalent functions, generalized convexity and the class of α -convex functions, and numerical estimates of the coefficient problem. The book goes on to summarize orthogonal polynomials, explore the de Branges theorem, and address current and emerging developments since the de Branges theorem.

Cool in Tucson Elizabeth Gunn,2014-09-30 Tucson police detective Sarah Burke, smart and ambitious, worries that Sergeant Delaney, her superior on the homicide squad, seems to have a grudge against her. Still smarting from a painful divorce, she puts personal concerns aside to concentrate on a body found in a parking lot. The case takes a bizarre turn when Sarah's young niece, Denny, neglected by her substance-abusing mother and struggling to stay in school, disappears. The search is complicated by interference from the drug ring that the suspected murderer's been working for, and Sarah's growing romantic interest in a troubled colleague rebuilding his life after injury...
