

Celderio

Michal Rosen-Zvi

Hawkmoths of Australia Maxwell Moulds,James Tuttle,David Lane,2020-01-20 Hawkmoths are large charismatic insects with highly variable and colourful larvae. Some species are specialised in their habitat preferences, but others are widespread and often encountered in gardens. However, little is known about most species, and associating the adults with their larvae has previously been difficult or impossible. Hawkmoths of Australia allows identification of all of the Australian hawkmoths for the first time and treats species found on mainland Australia, Tasmania and all offshore islands within Australian limits. It presents previously undescribed life histories of nearly all species and provides a comprehensive account of hawkmoth biology, including new parasitoids and their hawkmoth hosts. Detailed drawings and photographs show the external and internal morphology of adults and immatures, and eggs, larval instars and pupa. Keys are provided for last instar larvae and pupae of the 71 species that the authors have reared. The book is concluded by a glossary, appendices to parasitoids and larval foodplants, an extensive reference list with bibliographical notes and a comprehensive index. The wealth of new information in this book makes it an essential reference for anyone interested in these moths.

Hawkmoths of Australia is Volume 13 of the Monographs on Australian Lepidoptera Series.

Advances in Insect Physiology Stephen Simpson,2003-12-22 This volume is a serial index volume containing Volumes 1-29 of Advances in Insect Physiology.

The Entomologist ,1869

Lepidoptera Genetics Roy Robinson,2013-10-22 Lepidoptera Genetics provides a systematic account of the genetics and karyology of Lepidoptera. Topics covered include the use of biometry in genetic studies; population genetics and polymorphism; the rise of industrial melanism; and the evolution of mimicry. The genetics of Rhopalocera and Heterocera is also discussed. This book is comprised of eight chapters and begins with an overview of Lepidoptera species and their genetics, paying particular attention to color and pigmentation, breeding, and resistance to insecticides, as well as the effect of seasonal variations and the environment on Lepidoptera. The next chapter outlines the tenets of genetics that are of value for Lepidoptera research, including particulate heredity, random assortment, sex-linked inheritance, maternal inheritance, and mosaicism. The reader is methodically introduced to the application of biometry to the study of Lepidoptera genetics; the evolution of mimicry in Lepidoptera; and the known heredity of Rhopalocera and Heterocera. The final chapter examines the karyology of Lepidoptera, focusing on the haploid karyotype, polyploidy, chiasmata frequency, supernumerary chromosomes, and sex chromatin. This monograph will be a useful resource for entomologists, geneticists, and biologists.

The Hawkmoths of the Western Palaearctic Pittaway,2023-11-27 A detailed study of 57 sphingid species occurring in Europe (Ireland to the Urals), North Africa and the Middle East, placing particular emphasis on ecological factors governing population and distribution. The colour plates depict adults of all species, larvae of 40 species and 5 subspecies, and 13 types of habitat. A major work, of interest to lepidopterists and conservationists.
