The Story of Chadi Chadi Deen, 2019-08-11 Summer 2015. I'm on the seafront of Arabia at dusk, for the first time in - how long? Thirty years? A little more. In another life, my father used to bring me here. He would brood at the sea, staring furiously out across the Persian Gulf while his confused young son snuck nervous glances at him, desperate not to become the focus of his anger. I didn't cry then, but I'm crying now behind these sunglasses, and I'm desperate again, but only to conceal my sadness from my own child. She is standing nearby, quiet and patient, perhaps idly wondering why I've brought her to this quiet corner of the Arab world in the warm, fading light. Maybe she's wondering why I scrambled for my dark glasses and why I've been looking away from her for so long. Not many people are walking the promenade in the early evening. And I suspect that if a million people wandered past and glanced at us, and each took a different guess at who we are and what we are doing here, probably none of them would get it right. Where is the girl's mother? Well, she doesn't exactly have one - not in the conventional sense. Did my wife leave us? Did she die? No. No wife and none of those things happened. There's just us. Where are we from? I look Mediterranean, I know. Not terribly Arabic. But again, it's a hard question. I could say Middle Eastern, the land of my parents, where I spent my adolescence. I endured long, lonely years here in the Gulf, though I feel like a stranger here now. My best answer is that we're from London, the place where I finally became myself. Ask my daughter, and even though she holds an American passport, she'll agree - London is definitely our home. Every story nowadays is a 'journey': a journey to wealth or fame or joy; a journey out of poverty or obscurity or pain. Whether or not all those tales truly fit the term, a journey is surely the most accurate description for a story like mine. Plot it on a map: it begins in booming West Africa, then lurches unhappily in Arabia and to war-torn Lebanon. It lingers through several tense, dark years in the Hezbollah heartlands, when somehow martyrdom seemed like my best and likeliest move. And then the action moves to rainy Stirling, then mixed-up East London, with an unlikely detour to glorious Roanoke in the Blue Ridge Mountains of Virginia. Yes, it's definitely been a journey. And that's even before you look at the real borders I've crossed - the ones between religion and unbelief, the culture of east and west, forbidden sexuality and the natural, liberated kind. Put that all together with the title of this book and you'll surely begin to get a sense of the background from which I emerged and the life I finally found. I've come through war and intolerance and brutality; I've hated my very existence and toyed with the idea of death - to myself and, unbelievably, to others; I've crossed the world just to become who I am and find what I needed. And often, I had to plot my own route where there were no footprints to follow. Here, briefly distracted from the great joy of my life by memories of old nightmares, I suddenly realise I'm murmuring advice to the little boy I once was as if without my help he still might not make it. Certainly, it was a miracle that he did. At times like this, I can scarcely believe it myself.

The Iron Doors W. K. Chadi, 2011-08 When she is seven years old, Dalia learns she has the ability to read minds. When she is nine years old, her enemies learn this fact-so they kidnap her. When she is twenty-two, they realize how dangerous she has become-and they kill her. But because she's a Zeti-a member of a mysterious race with even more mysterious powers-she survives her death, only to find that the days she has stolen have their own price. With no small amount of horror, she comes to realize her love for Alexander, the same man who had taken her to her death. For her safety, she is sent to Buthayna, a world akin to Eden and impervious to evil; there she discovers she's the Promised One. She is told that in order to fulfill her destiny, she has to be whole-but this esoteric message only serves to confuse her. Although she has been told the answers she needs are buried within her own memories, they are hidden behind unbreakable iron doors in her mind, and even she does not know how to open them. When Alexander ultimately finds her, she understands why she has always feared him. He killed her once ... but will he kill her again?

Reborn Chadi Abi Fadel, 2022-10-08 After a traumatic car crash he survived in Beirut, Chadi Abi Fadel's life changed. He was declared clinically dead, in a coma for three months, and stayed on a wheelchair with little hope of being able to stand up. Add to this the initial COVID outbreak and the unstable situation that Lebanon was going through. Against all odds, he completed a 10KM marathon at the heart of Beirut, walking distance away from the accident. *Reborn* is a memoir that recounts his journey of transformation. Join Chadi in a journey filled with art, science and dedication in his effort to regain life.

Rascal's Republic Brittany Chadi, 2020-08-10 *Rascal's Republic* is a catalogue of the author's early twenties through poetry, unstructured prose, and photographs. While there is a table of contents, the book is not designed to be read in any particular order. Many passages have been informed by art, films, or writings. The book also features literature inspired by Fela Kuti, Betsey Johnson, Claes Oldenburg, William Burroughs, and Theodore Adorno.

Quasi-Democracy David Stewart, 2001-02-01 In *Quasi-Democracy?* David Stewart and Keith Archer examine political parties and leadership selection in Alberta using mail-back surveys administered to voters who participated in the Conservative, Liberal, and NDP leadership conventions elections of the 1990s. Leadership selection events, they contend, provide rare opportunities for observing the internal workings of the parties and people who stand between the politicians and the electorate.

Semiconductor Surfaces and Interfaces Winfried Mönch, 2013-03-09 This third edition has been thoroughly revised and updated. In particular it now includes an extensive discussion of the band lineup at semiconductor interfaces. The unifying concept is the continuum of interface-induced gap states.

D(X) Centres and other Metastable Defects in Semiconductors, Proceedings of the INT Symposium, Mauterndorf, Austria, 18-22 February 1991 W. Jantsch, R.A. Stradling, 2020-11-26 Since the first reports on metastable defects in III-V and II-VI compound semiconductors appeared in the late 1960s, the number of reports on defects with metastable states has been growing at an ever increasing rate. D(X)-center and other metastability defects cause many technical problems that are exacerbated by the uncertainty and controversy surrounding the mechanisms that cause them. A lively mix of theoretical and experimental discussions, *D(X)-Centres and other Metastable Defects in Semiconductors* presents a timely investigation of these systems. The book discusses topics such as, the validity of negative or positive U models, as well as alternative views that challenge existing ideas. The richness and precision of experimental data now emerging in the field is chronicled as are new investigative techniques. Based on an INT symposium, this book provides a successful forum where an extraordinary variety of ideas, including new perspectives, are examined critically.

II-VI Semiconductor Blue/Green Light Emitters, 1997-03-13 This volume provides one of the first comprehensive reviews combining recent breakthroughs in blue/green semiconductor lasers based on II-VI materials and fundamentally important issues about the development and extension of these lasers to commercial applications. These lasers are on the cutting-edge of technology and could revolutionize areas such as optical information storage and color displays in the next few years. An important focus of this book is on the recent laboratory development of an entirely new class of diode lasers, based on a different family of semiconductor materials, which emit at much shorter wavelengths in the green and blue portion of the spectrum. These new and exciting developments in optoelectronics, which are still undergoing laboratory testing, have the potential of providing a major increase in storage capacity over current CD technology. Besides applications in high-density digital optical storage, other possible applications for the compact blue-green lasers will be in areas ranging from flat panel displays to multicolor printing to medical diagnostics. Details practical issues of the growth of laser structures by molecular beam epitaxy by pioneers in the industry Explains how the barriers of doping and electrical contact were overcome by using wide bandgap II-VI semiconductors Documents thirty years of research

Electronic Structure, 2000-07-19 This book is the second volume in the Handbook of Surface Science series and deals with aspects of the electronic structure of surfaces as investigated by means of the experimental and theoretical methods of physics. The importance of understanding surface phenomena stems from the fact that for many physical and chemical phenomena, the surface plays a key role: in electronic, magnetic, and optical devices, in heterogeneous catalysis, in epitaxial growth, and the application of protective coatings, for example. Therefore a better understanding and, ultimately, a predictive description of surface and interface properties is vital for the progress of modern technology. An investigation of surface electronic structure is also central to our understanding of all aspects of surfaces from a fundamental point of view. The chapters presented here review the goals achieved in the field and map out the challenges ahead, both in experiment and theory.

The Chemical Physics of Solid Surfaces and Heterogeneous Catalysis D.A. King, 2012-12-02 Surface Properties of Electronic Materials is the fifth volume of the series, The Chemical Physics of Solid Surfaces and Heterogeneous Catalysis. This volume indicates the present state of some basic properties of semiconductor surfaces. Chapter one summarizes the general problems in electronic materials and the areas affected by the surface science methods. The next two chapters illustrate the existing perception of the electronic and structural properties of elemental and compound semiconductor surfaces. This volume also deals with the properties of adsorption of semiconductors relating to both relevant gas phase species and metals. Chapters four to six of this volume explore compound semiconductors and elemental semiconductors. The remaining chapters of this volume explore the adsorption of metals on elemental semiconductors; aspects of growth kinetics and dynamics involved in molecular beam epitaxy; molecular beam epitaxy of silicon; insulators; and metastable phases. The last chapter covers the surface chemistry of dry etching processes.

Basic Properties of Semiconductors P.T. Landsberg, 2016-04-19 Since Volume 1 was published in 1982, the centres of interest in the basic physics of semiconductors have shifted. Volume 1 was called Band Theory and Transport Properties in the first edition, but the subject has broadened to such an extent that Basic Properties is now a more suitable title. Seven chapters have been rewritten by the original authors. However, twelve chapters are essentially new, with the bulk of this work being devoted to important current topics which give this volume an almost encyclopaedic form. The first three chapters discuss various aspects of modern band theory and the next two analyze impurities in semiconductors. Then follow chapters on semiconductor statistics and on surfaces, interfaces and band offsets as they occur in heterojunctions. Chapters 8 to 19 report on newer topics (though a survey of transport properties of carriers is also included). Among these are transport of hot electrons, and thermoelectric effects including here and elsewhere properties of low-dimensional and mesoscopic structures. The electron-hole liquid, the quantum Hall effect, localisation, ballistic transport, coherence in superlattices, current ideas on tunnelling and on quantum confinement and scattering processes are also covered.

Birth, Life and Death of Dopaminergic Neurons in the Substantia Nigra Giuseppe di Giovanni, Vincenzo Di Matteo, Ennio Esposito, 2009-09-02 This book provides a unique and timely multidisciplinary synthesis of our current knowledge of the anatomy, pharmacology, physiology and pathology of the substantia nigra pars compacta (SNc) dopaminergic neurons. The single chapters, written by top scientists in their fields, explore the life cycle of dopaminergic neurons from their birth to death, the cause of Parkinson's disease, the second most common and disabling condition in the elderly population. Nevertheless, the intracellular cascade of events leading to dopamine cell death is still unknown and, consequently, treatment is symptomatic rather than preventive. The mechanisms by which alterations cause neuronal death, new therapeutic approaches and the latest evidence of a possible de novo neurogenesis in the SNc are reviewed and singled out in different chapters. This book bridges basic science and clinical practice and will prepare the reader for the next few years, which will surely be eventful in terms of the progress of dopamine research.

Atomistic Simulation of Materials David J. Srolovitz, V. Vitek, 2012-12-06 This book contains proceedings of an international symposium on Atomistic Simulation of Materials: Beyond Pair Potentials which was held in Chicago

from the 25th to 30 of September 1988, in conjunction with the ASM World Materials Congress. This symposium was financially supported by the Energy Conversion and Utilization Technology Program of the U. S Department of Energy and by the Air Force Office of Scientific Research. A total of fifty four talks were presented of which twenty one were invited. Atomistic simulations are now common in materials research. Such simulations are currently used to determine the structural and thermodynamic properties of crystalline solids, glasses and liquids. They are of particular importance in studies of crystal defects, interfaces and surfaces since their structures and behavior play a dominant role in most materials properties. The utility of atomistic simulations lies in their ability to provide information on those length scales where continuum theory breaks down and instead complex many body problems have to be solved to understand atomic level structures and processes.

Hydrogen in Semiconductors M. Stutzmann, J. Chevallier, 2012-12-02 Hydrogen on semiconductor surfaces has been an area of considerable activity over the last two decades. Structural, thermal, and dynamical properties of hydrogen chemisorbed on crystalline silicon and other semiconductors have been studied in great detail. These properties serve as a reference for related, but more complex systems such as hydrogen at multiple vacancies in crystalline semiconductors or at microvoids in amorphous samples. Interesting from a surface physics point of view is the fact that hydrogen as a monovalent element is an ideal terminator for unsaturated bonds on surfaces and therefore tends to have a large influence on surface reconstruction. A related phenomenon with large technological impact (for example in low cost solar cells) is the passivation of grain boundaries in microcrystalline semiconductors. Finally, hydrogenated semiconductor surfaces always appear as a boundary layer during low-energy hydrogenation of bulk semiconductors, so that a complete description of hydrogen uptake or desorption necessarily has to take these surfaces into account. This collection of invited and contributed papers has been carefully balanced to deal with amorphous and crystalline semiconductors and surfaces and presents basic and experimental work (basic and applied) as well as theory. The resulting volume presents a summary of the state-of-the-art in the field of hydrogen in semiconductors and will hopefully stimulate future work in this area.
