The Public Participation Handbook James L. Creighton,2005-03-11 Internationally renowned facilitator and public participation consultant James L. Creighton offers a practical guide to designing and facilitating public participation of the public in environmental and public policy decision making. Written for government officials, public and community leaders, and professional facilitators, The Public Participation Handbook is a toolkit for designing a participation process, selecting techniques to encourage participation, facilitating successful public meetings, working with the media, and evaluating the program. The book is also filled with practical advice, checklists, worksheets, and illustrative examples.

Self-diffusion in Electrolyte Solutions R. Mills,V.M.M. Lobo,2013-10-22 This compilation - the first of its kind - fills a real gap in the field of electrolyte data. Virtually all self-diffusion data in electrolyte solutions as reported in the literature have been examined and the book contains over 400 tables covering diffusion in binary and ternary aqueous solutions, in mixed

solvents, and of non-electrolytes in various solvents. An important feature of the compilation is that all data have been critically examined and their accuracy assessed. Other features are an introductory chapter in which the methods of measurement are reviewed; appendices containing tables of the limiting self-diffusion coefficients of ions; and a list of references to data which have been omitted but where information about the diffusing system is given. This is the only complete compilation of self-diffusion data in electrolyte solutions. It will appeal to electrochemists in general, particularly now that recent developments in the theory of transport processes require these data. It will also have a special appeal to electroanalytical chemists in that the ionic self-diffusion coefficient is an important quantity for the interpretation of electrode reactions. In addition, the book will interest geochemists and environmental chemists because the migration of radioactive ions from nuclear waste in certain aqueous media will be governed by the tracer-diffusion coefficient.

A Critical and Exegetical Commentary on the Book of Daniel R. H. Charles,2006-05-04 With the exception of Dr. Montgomery in his Commentary in the International Critical Commentary Series, all my forerunners in the study of Daniel have been handicapped in many respects owing to the lack of an Aramaic grammar which dealt with the historical development of the language. . . . Accordingly a large section of the Introduction is devoted to the grammatical development of Aramaic idioms, so far as these have any bearing on the Aramaic of our text. . . . Again I may remark that though many of the greatest Semitic scholars have edited Daniel, not one of them seems to have had a first hand knowledge of the characteristics of Apocalyptic outside Daniel. . . . In

publishing this Commentary my chief claim is, so far as possible, to recover the oldest form of the text, and to interpret that text in conformity with the usages of Jewish Apocalyptic. --from the Preface
