Radionuclides in the Study of Marine Processes P.J. Kershaw,D.S. Woodhead,2012-12-06 The Norwich Symposium, 'Radionuclides in the Study of Marine Processes', is a sequel to the very successful conference held at Cherbourg, France in June 1987. The international character of the meeting has been maintained with thirty-eight contributions, from seventeen countries, being accepted for oral presentation. For many years, the radioactive properties of the naturally occurring radionuclides have been used to determine their distributions in the marine environment and, more generally, to gain an understanding of the dynamic processes which control their behaviour in attaining these distributions. More recently the inputs from human activities of both natural and artificial (i.e. man-made) radionuclides have provided additional opportunities for the study of marine processes on local, regional and global scales. Because the sources of artificial radionuclides are often reasonably well defined in space and time, and because a wider range of elements is represented, new viewpoints for the study of processes have become available. Although it is outside the scope of this Symposium, it must be acknowledged that the radiological protection requirements for radioactive waste disposal practices to be based on a sound scientific understanding of radionuclide behaviour in the sea have also provided a very strong impetus for the studies.

Intelligent Materials, Second International Conference Proceedings Craig A. Rogers,1994-01-01 The key science and technology challenges which will facilitate the transition from a make do and mend philosophy inevitably restricting the degree of intelligence which can be engineered and the designer materials systems philosophy which is the ultimate goal are considered. The longer term vision will need to accord much more closely with nature's design paradigms, with control at the molecular, nano, micro and macro level of synthesis and assembly, of active self repair materials systems in function shapes.

Fourth International Conference on Current and Future Trends in Bridge Design, Construction and Maintenance B. Barr,2006 This is a state-of-the-art reference, an exchange of innovative

experience, creative thinking and industry forecasts. This volume presents the proceedings of the fourth international conference in this series based in the Asia Pacific region, in Kuala Lumpur in October 2005 and is applicable to all sectors of the bridge engineering community. **BACKGROUND KNOWLEDGE AND FUTURE PERFORMANCE** The Institution of Civil Engineers has collaborated with internationally renowned bridge engineers to organise three successful conferences to celebrate the enormous achievements made in the field of bridge engineering in recent years. As a discipline, bridge engineering not only requires knowledge and experience of bridge design and construction techniques but must also deal with increasing challenges posed by the need to maintain the long-term performance of structures throughout an extended service life. In many parts of the world natural phenomena such as seismic events can cause significant damage to force major repairs or reconstruction. Therefore, it is appropriate that the first plenary session of this conference is entitled Engineering for Seismic Performance. **READERSHIP** This compilation of papers will benefit practising civil and structural engineers in consulting firms and government agencies, bridge contractors, research institutes, universities and colleges. In short, it is of importance to all engineers involved in any aspect of the design, construction and repair, maintenance and refurbishment of bridges.

The book is divided in the sections below: Invited papers Keynote papers Theme lectures Special Session on Large Scale Testing Special Session on Liquefaction Projects Special Session on Lessons learned from recent earthquakes Special Session on the Central Italy earthquake Regular papers Earthquake Geotechnical Engineering for Protection and Development of Environment and Constructions provides a significant up-to-date collection of recent experiences and developments, and aims at engineers, geologists and seismologists, consultants, public and private contractors, local national and international authorities, and to all those involved in research and practice related to Earthquake Geotechnical Engineering.

these relationships -- and are imperiled by them as well. Nowhere is this truer than on the Japanese archipelago. During the nineteenth century, Japan saw the rise of *Homo sapiens industrialis*, a new breed of human transformed by an engineered, industrialized, and poisonous environment. Toxins moved freely from mines, factory sites, and rice paddies into human bodies. *Toxic Archipelago* explores how toxic pollution works its way into porous human bodies and brings unimaginable pain to some of them. Brett Walker examines startling case studies of industrial toxins that know no boundaries: deaths from insecticide contaminations; poisonings from copper, zinc, and lead mining; congenital deformities from methylmercury factory effluents; and lung diseases from sulfur dioxide and asbestos. This powerful, probing book demonstrates how the Japanese archipelago has become industrialized over the last two hundred years -- and how people and the environment have suffered as a consequence.

Tour of Duty Constantine Nomikos Vaporis, 2009-11-12 A Choice Outstanding Academic Title Alternate attendance (*sankin kotai*) was one of the central institutions of Edo-period (1603-1868) Japan and one of the most unusual examples of a system of enforced elite mobility in world history. It required the daimyo to divide their time between their domains and the city of Edo, where they waited upon the Tokugawa shogun. Based on a prodigious amount of research in both published and archival primary sources, *Tour of Duty* renders alternate attendance as a lived experience, for not only the daimyo but also the samurai retainers who accompanied them. Beyond exploring the nature of travel to and from the capital as well as the period of enforced bachelorhood there, Constantine Vaporis elucidates-for the first time-the significance of alternate attendance as an engine of cultural, intellectual, material, and technological exchange. Vaporis argues against the view that cultural change simply emanated from the center (Edo) and reveals more complex patterns of cultural circulation and production taking place between the domains and Edo and among distant parts of Japan. What is generally known as Edo culture in fact incorporated elements from the localities. In some cases, Edo acted as a nexus for exchange; at other times, culture traveled from one area to another without passing through the capital. As a result, even those who did not directly participate in alternate attendance experienced a world much larger than their own. Vaporis begins by detailing the nature of the trip to and from the capital for one particular large-scale domain, Tosa, and its men and goes on to analyze the political and cultural meanings of the processions of the daimyo and their extensive entourages up and down the highways. These parade-like movements were replete with symbolic import for the nature of early modern governance. Later chapters are concerned with the physical and social environment experienced by the daimyo's retainers in Edo; they also address the question of who went to Edo and why, the network of physical spaces in which the domainal samurai lived, the issue of staffing, political power, and the daily lives and consumption habits of retainers. Finally, Vaporis examines retainers as carriers of culture, both in a literal and a figurative sense. In

doing so, he reveals the significance of travel for retainers and their identity as consumers and producers of culture, thus proposing a multivalent model of cultural change.

Secrecy’s Power Clark Chilson,2014-07-31 Shin has long been one of the most popular forms of Buddhism in Japan. As a devotional tradition that emphasizes gratitude and trust in Amida Buddha, it is thought to have little to do with secrecy. Yet for centuries, Shin Buddhists met on secluded mountains, in homes, and in the backrooms of stores to teach their hidden doctrines and hold clandestine rites. Among their adherents was D. T. Suzuki’s mother, who took her son to covert Shin meetings when he was a boy. Even among Shin experts, covert followers were relatively unknown; historians who studied them claimed they had disappeared more than a century ago. A serendipitous encounter, however, led to author Clark Chilson’s introduction to the leader of a covert Shin Buddhist group—one of several that to this day conceal the very existence of their beliefs and practices. In *Secrecy’s Power* Chilson explains how and why they have remained hidden. Drawing on historical and ethnographic sources, as well as fieldwork among covert Shin Buddhists in central Japan, *Secrecy’s Power* introduces the histories, doctrines, and practices of different covert Shin Buddhists. It shows how, despite assumptions to the contrary, secrecy has been a significant part of Shin’s history since the thirteenth century, when Shinran disowned his eldest son for claiming secret knowledge. The work also demonstrates how secrecy in Shin has long been both a source of conflict and a response to it. Some covert Shin Buddhists were persecuted because of their secrecy, while others used it to protect themselves from persecution under rulers hostile to Shin. *Secrecy’s Power* is a groundbreaking work that makes an important contribution to our knowledge on secrecy and Shin Buddhism. Organized around the various consequences concealment has had for covert Shin Buddhists, it provides new insights into the power of secrecy to produce multiple effects—even polar opposite ones. It also sheds light on ignored corners of Shin Buddhism to reveal a much richer, more diverse, and more contested tradition than commonly is understood.
