Cultivated vegetables of the world: a multilingual onomasticon Stanley J. Kays,2011-10-03 Vegetables make up a major portion of the diet of humans and are critical for good health. With the world population predicted to reach 9 billion people by 2050, they will play an increasingly important role in food availability. The purpose of this book is to facilitate accuracy in communication among individuals working in agriculture and a better understand of the extent and diversity of vegetable production and utilization worldwide. Increasing global economic interdependence and trade in agricultural products makes precise communication among individuals utilizing different languages essential. There is currently a wide range of vegetables shipped around the world as seasonal, economic and other forces are shifting markets from exclusively local toward global. The text provides up-to-date scientific names, synonyms, and common names for the commercially cultivated vegetable crops grown worldwide (404 crops), in addition to

information on the plant parts utilized and their method of preparation. Common names from 370 languages are presented along with information on each of the languages. The text represents an essential reference source with the information presented in a concise and readily accessible format. It allows indentifying a crop from the common name in a diverse cross-section of languages and is therefore of use to university and government researchers, libraries worldwide, agricultural organizations, agricultural scientists, embassies, international travelers, vegetable growers, shippers, packers, produce buyers, grocery store managers, gourmet restaurants, chefs, and gardeners.

An Index to Reproductions of Paintings by Twentieth-Century Chinese Artists Ellen Johnston Laing, 2020-08-06 In the second half of the twentieth century, studies in Chinese painting history have been greatly aided by several major lists of Chinese artists and their works. Published between 1956 and 1980, these lists were limited to Imperial China. The current index covers the period from 1912 to around 1980. It includes the names of approximately 3,500 traditional-style artists along with lists of their works, reproduced in some 264 monographs, books, journals, and catalogs published from the 1920s to around 1980. With a few exceptions, artists working after 1949 outside continental China are excluded. Revised Edition, 1998; first published by the Asian Studies Program, University of Oregon, 1984.

Golden Elixir Chi Kung Mantak Chia, 2004-01-23 Techniques for preparing and using the Golden Elixir to achieve optimum health and spiritual vitality •Includes practical exercises and postures to produce regenerative effects in one's own saliva •Reveals how combining saliva with the hormonal fluids released

during sexual practices creates the Elixir of Immortality Golden Elixir is the fountain or water of life. It is the combination of saliva, hormonal fluids, and external essences that when mixed together become the Elixir of Immortality. Saliva has long been considered by Taoists as a key component for optimum health. Some Taoist texts recommend swallowing the saliva up to 1,000 times a day to promote physical healing. Thousands of years ago Taoists became aware of changes in the taste and consistency of saliva that accompanied meditative practices. They learned that by combining saliva with the hormonal fluids and essences released during sexual activities a powerful elixir is formed. Taoists believe that this Golden Elixir is not only a physical healing agent, but also is a major transformative agent in preparing for higher spiritual work. Golden Elixir Chi Kung contains twelve postures that develop and utilize the healing power of saliva. Ten of these involve gathering energy and forces through the body's hair, which acts as a negative-energy filter and can also be used to store surplus positive energy. Taoists regard the hair as antennae extending out into nature and the universe. By utilizing the practices in this book, readers can develop self-healing abilities and establish a better connection to the universe as a whole.

Electromagnetic Phenomena in Matter Igor N. Toptygin, 2015-05-04 Modern electrodynamics in different media is a wide branch of electrodynamics which combines the exact theory of electromagnetic fields in the presence of electric charges and currents with statistical description of these fields in gases, plasmas, liquids and solids; dielectrics, conductors and superconductors. It is widely used in physics and in other natural sciences (such as astrophysics and geophysics, biophysics, ecology and evolution of terrestrial climate), and in various technological applications (radio electronics, technology of artificial materials, laser-

based technological processes, propagation of bunches of charges particles, linear and nonlinear electromagnetic waves, etc.). Electrodynamics of matter is based on the exact fundamental (microscopic) electrodynamics but is supplemented with specific descriptions of electromagnetic fields in various media using the methods of statistical physics, quantum mechanics, physics of condensed matter (including theory of superconductivity), physical kinetics and plasma physics. This book presents in one unique volume a systematic description of the main electrodynamic phenomena in matter: - A large variety of theoretical approaches used in describing various media - Numerous important manifestations of electrodynamics in matter (magnetic materials, superconductivity, magnetic hydrodynamics, holography, radiation in crystals, solitons, etc.) - A description of the applications used in different branches of physics and many other fields of natural sciences - Describes the whole complexity of electrodynamics in matter including material at different levels. - Oriented towards 3-4 year bachelors, masters, and PhD students, as well as lectures, and engineers and scientists working in the field. - The reader will need a basic knowledge of general physics, higher mathematics, classical mechanics and microscopic (fundamental) electrodynamics at the standard university level - All examples and problems are described in detail in the text to help the reader learn how to solve problems - Advanced problems are marked with one asterisk, and the most advanced ones with two asterisks. Some problems are recommended to be solved first, and are marked by filled dots; they are more general and important or contain results used in other problems.

Literary Representations of “Mainlanders” in Taiwan Phyllis Yu-ting Huang, 2020-11-22 This book examines literary representations of mainlander identity articulated by Taiwan’s second-generation mainlander writers, who share the common feature of emotional ambivalence between Taiwan and China. Closely analyzing literary narratives of Chinese civil war migrants and their descendants in Taiwan, a group referred to as mainlanders (waishengren), this book demonstrates that these Chinese migrants’ ideas of China and Chineseness have adapted through time with their gradual settlement in the host land. Drawing upon theories of Sinophone Studies and memory studies, this book argues that during the three decades in which Taiwan moved away from the Kuomintang’s authoritarian rule to a democratic society, mainlander identity was narrated as a transformation from a diasporic Chinese identity to a more fluid and elusive Sinophone identity. Characterized by the features of cultural hybridity and emotional in-betweenness, mainlander identity in the eight works explored contests the existing Sinocentric discourse of Chineseness. An important contribution to the current research on Taiwan’s identity politics, this book will be of interest to academics in the field of Taiwan studies, Sinophone studies, Chinese migration, and Taiwanese literature as well as Chinese literature in general.
