📖 **Structural Dynamics and Economic Growth** Richard Arena,Pier Luigi Porta,2012-05-03 Ever since Adam Smith, economists have been preoccupied with the puzzle of economic growth. The standard mainstream models of economic growth were and often still are based either on assumptions of diminishing returns on capital with technological innovation or on endogenous dynamics combined with a corresponding technological and institutional setting. An alternative model of economic growth emerged from the Cambridge School of Keynesian economists in the 1950s and 1960s. This model - developed mainly by Luigi Pasinetti - emphasizes the importance of demand, human learning and the growth dynamics of industrial systems. Finally, in the past decade, new mainstream models have emerged incorporating technology or demand-based structural change and extending the notion of balanced growth. This collection of essays reassesses Pasinetti's theory of structural dynamics in the context of these recent developments, with contributions from economists writing in both the mainstream and the Cambridge Keynesian traditions and including Luigi Pasinetti, William Baumol, Geoffrey Harcourt and Nobel laureate Robert Solow.

📖 **Review of Digital Communication** J. Das,2003 With the global trends in communication and data networks, leading to IdN and ISdN, there is a special need for a comprehensive book on the state-of-the-art in digital communication. In the absence of such a reference book, most of our senior professionals and academics find it very hard to keep themselves abreast of the recent developments leading to information revolution and digital revolution. The present volume is an attempt to fill this gap. The book consists of ten chapters, and discusses such topics as, principles of digital modulation, source encoding, data transmission through cables and optical fibres, digital radio including satellite communication, data networks and digital switching, information theory and coding, survival of communication including spread spectrum techniques, and future trends including ISdN. Conceptually the chapters attempt to discuss from a system point of view, a total digital communication network, e.g., IdN, and the total range of signal processing techniques has been presented in subsequent chapters, thus maintaining a continuity of thought from end-to-end. The book is, therefore, addressed to both professionals in telecommunications and senior students in this area.

📖 **Wearable and Nearable Biosensors and Systems for Healthcare** Marco Di Rienzo,Ramakrishna Mukkamala,2021-09-01 Biosensors and systems in the form of wearables and “nearables” (i.e., everyday sensorized objects with transmitting capabilities such as smartphones) are rapidly evolving for use in healthcare. Unlike conventional approaches, these technologies can enable seamless or on-demand physiological monitoring, anytime and anywhere. Such monitoring can help transform healthcare from the current reactive, one-size-fits-all, hospital-centered approach into a future proactive, personalized, decentralized structure. Wearable and nearable biosensors and systems have been made possible through integrated innovations in sensor design, electronics, data transmission, power management, and signal processing. Although much progress has been made in this field, many open challenges for the scientific community remain, especially for those applications requiring high accuracy. This book contains the 12 papers that constituted a recent special issue of Sensors sharing the same title. The aim of the initiative was to provide a collection of state-of-the-art investigations on wearables and nearables, in order to stimulate technological advances and the use of the technology to benefit healthcare. The topics covered by the book offer both depth and breadth pertaining to wearable and nearable technology. They include new biosensors and data transmission techniques, studies on accelerometers, signal processing, and cardiovascular monitoring, clinical applications, and validation of commercial devices.

 **DEEP SEISMIC SOUNDING OF THE EARTH’S CRUST AND UPPER MANTLE** Irina P. Kosminskaya,2012-12-06 Deep seismic sounding was proposed by G. A. Gamburtsev and developed under his guidance during the period 1948-1955 at the Institute of Physics of the Earth of the Academy of Sciences of the USSR. During that period also, the first geophysical results concerning the deep structure of the earth’s crust in several regions in Tien-Shan, the Pamir, and Turkmenia were observed. Beginning with 1956, the deep seismic sounding method has been used widely by geophysical research groups as well as by geophysical service organizations for regional studies in the USSR. Descriptions of this work have been given in reports by Yu. N. Godin, V. V. Fedynskii, D. N. Kazanli, and others. New variants of the deep seismic sounding method have been developed; continuous profiling (Yu. N. Godin, and others), and point soundings (N. N. Puzyrev, and others). Deep seismic soundings have been carried on outside of Russia also, and studies have been carried out on the use of the deep seismic sounding method in marine applications (E. I. Gal’perin, S. M. Zverev, I. P. Kosminskaya, Yu. P. Neprochnov, and others). Over the past decade, the deep seismic sounding method has joined the suite of geophysical studies as a highly detailed method for studying the earth’s crust and upper mantle to depths of 50 to 100 km on land, and of 15 to 25 km in the deep oceans.
