Future Vision and Trends on Shapes, Geometry and Algebra Raffaele de Amicis, Giuseppe Conti, 2014-06-13 Mathematical algorithms are a fundamental component of Computer Aided Design and Manufacturing (CAD/CAM) systems. This book provides a bridge between algebraic geometry and geometric modelling algorithms, formulated within a computer science framework. Apart from the algebraic geometry topics covered, the entire book is based on the unifying concept of using algebraic techniques – properly specialized to solve geometric problems – to seriously improve accuracy, robustness and efficiency of CAD-systems. It provides new approaches as well as industrial applications to deform surfaces when animating virtual characters, to automatically compare images of handwritten signatures and to improve control of NC machines. This book further introduces a noteworthy representation based on 2D contours, which is essential to model the metal sheet in industrial processes. It additionally reviews applications of numerical algebraic geometry to differential equations systems with multiple solutions and bifurcations. *Future Vision and Trends on Shapes, Geometry and Algebra* is aimed specialists in the area of mathematics and computer science on the one hand and on the other hand at those who want to become familiar with the practical application of algebraic geometry and geometric modelling such as students, researchers and doctorates.

Troubleshooting Analog Circuits Robert A. Pease, 2013-10-22 *Troubleshooting Analog Circuits* is a guidebook for solving product or process related problems in analog circuits. The book also provides advice in selecting equipment, preventing problems, and general tips. The coverage of the book includes the philosophy of troubleshooting; the modes of failure of various components; and preventive measures. The text also deals with the active components of analog circuits, including diodes and rectifiers, optically coupled devices, solar cells, and batteries. The book will be of great use to both students and practitioners of electronics engineering. Other professionals dealing with electronics will also benefit from the text, such as electric technicians.

Building Sustainable Cities Aldo Alvarez-Risco, Marc Rosen, Shyla Del-Aguila-Arcentales, Dora Marinova, 2020-09-04 This book describes a broad view of sustainability as a crucial factor for the success of its implementation. Not only the environmental aspects of the sustainable cities' development are reviewed but the economic and social aspects of it, as highlighted in the UN Sustainable Development Goal 11 (make cities and human settlements inclusive, safe, resilient and sustainable). Nowadays, researchers, students, and stakeholders are highly involved in sustainability issues. Because of this, they need a guiding document to help them develop and implement sustainability programs at the level of companies and institutions. In this book, the authors discuss and explain basic concepts of sustainability-related to social, economic and environmental aspects, as well as strategies for its implementation.

Using Algebraic Geometry David A. Cox, John Little, DONAL OSHEA, 2013-04-17 An illustration of the many uses of algebraic geometry, highlighting the more recent applications of Groebner bases and resultants. Along the way, the authors provide an introduction to some algebraic objects and techniques more advanced than typically encountered in a first course. The book is accessible to non-specialists and to readers with a diverse range of backgrounds, assuming readers know the material covered in standard undergraduate courses, including abstract algebra. But

because the text is intended for beginning graduate students, it does not require graduate algebra, and in particular, does not assume that the reader is familiar with modules.

The Nimzo-Indian 4 E3 Carsten Hansen,2002-06 Ever since Nimzowitsch introduced his flexible, dynamic defence to the queen's pawn, debate has raged over White's best reply. Many variations have been in and out of fashion, but one line in particular has proved an enduring weapon - the sound and solid 4 e3 line, known as the Rubinstein Variation. The 4 e3 Nimzo is extraordinarily rich in strategy. All manner of different central pawn-structures can arise, such as the blocked centre characteristic of the Hubner Variation and a variety of IQP positions. Moreover, in some lines the central tension persists well into the middlegame. The 4 e3 Nimzo provides a stern test of both players' understanding of chess, and so is an ideal choice for those who are looking to win as either colour.
