An Introduction to Cultural Ecology Mark Q. Sutton, E. N. Anderson, 2020-08-26 This contemporary introduction to the principles and

research base of cultural ecology is the ideal textbook for advanced undergraduate and beginning graduate courses that deal with the intersection of humans and the environment in traditional societies. After introducing the basic principles of cultural anthropology, environmental studies, and human biological adaptations to the environment, the book provides a thorough discussion of the history of, and theoretical basis behind, cultural ecology. The bulk of the book outlines the broad economic strategies used by traditional cultures: hunting/gathering, horticulture, pastoralism, and agriculture. Fully explicated with cases, illustrations, and charts on topics as diverse as salmon ceremonies among Northwest Indians, contemporary Maya agriculture, and the sacred groves in southern China, this book gives a global view of these strategies. An important emphasis in this text is on the nature of contemporary ecological issues, how peoples worldwide adapt to them, and what the Western world can learn from their experiences. A perfect text for courses in anthropology, environmental studies, and sociology.

Racial Politics in Post-Revolutionary Cuba Mark Q. Sawyer, 2005-11-28 This book analyzes the triumphs and failures of the Castro regime in the area of race relations. It places the Cuban revolution in a comparative and international framework and challenges arguments that the regime eliminated racial inequality or that it was profoundly racist. Through interviews, historical materials, and survey research, it provides a balanced view. The book maintains that Cuba has not been a racial democracy as some have argued. However, it also argues that Cuba has done more than any other society to eliminate racial inequality. The contemporary outlook of the book demonstrates how much of Cuban racial ideology was unchanged by the revolution. Thus, the current implementation of market reforms and in particular tourism has exacerbated racial inequalities. Finally, it holds that despite these shortcomings, the regime remains popular among blacks because they perceive their alternatives of the US and the Miami Exile community to be far worse.

Bioarchaeology Mark Q. Sutton, 2020-11-15 Bioarchaeology covers the history and general theory of the field plus the recovery and laboratory treatment of human remains. Bioarchaeology is the study of human remains in context from

an archaeological and anthropological perspective. The book explores, through numerous case studies, how the ways a society deals with their dead can reveal a great deal about that society, including its religious, political, economic, and social organizations. It details recovery methods and how, once recovered, human remains can be analyzed to reveal details about the funerary system of the subject society and inform on a variety of other issues, such as health, demography, disease, workloads, mobility, sex and gender, and migration. Finally, the book highlights how bioarchaeological techniques can be used in contemporary forensic settings and in investigations of genocide and war crimes. In Bioarchaeology, theories, principles, and scientific techniques are laid out in a clear, understandable way, and students of archaeology at undergraduate and graduate levels will find this an excellent guide to the field.

Sutton,2021-03-30 Archaeology: The Science of the Human Past provides students with a thorough understanding of what archaeology is and how it operates and familiarizes them with fundamental archaeological concepts and methods. This volume introduces the basic components of archaeology, including sites, artifacts, ecofacts, remote sensing, and excavation. It discusses how archaeologists obtain and classify information and how they analyze this information to formulate and test models of what happened in the past. Cultural resource management and the laws and regulations that deal with archaeology around the world are described.

Archaeology is placed in the context of contemporary issues, from environmental problems to issues affecting Indigenous populations. The sixth edition has been updated and simplified to create a more streamlined volume to meet the needs of the students and teachers for whom it is designed, reflecting the latest developments in archaeological techniques and approaches. Allowing students to understand the theoretical and scientific aspects of archaeology and how various archaeological perspectives and techniques help us understand how and what we know about the past, Archaeology: The Science of the Human Past is an ideal introduction to archaeology.

Paleonutrition Mark Q. Sutton, Kristin D. Sobolik, Jill K. Gardner, 2010-04-15
Paleonutrition is the analysis of prehistoric human diets and the interpretation of dietary intake in relation to health and nutrition. As a field of study, it addresses prehistoric diets in order to determine the biological and cultural implications for individuals as well as for entire populations, placing archaeological interpretations into an anthropological context. Throughout history, and long before written records, human culture has been constantly in flux. The study of paleonutrition provides valuable insights into shifts and changes in human history, whatever their causes. This is the most comprehensive and up-to-date book on the topic. Intended for students and professionals, it describes the nature of paleonutrition studies, reviews the history of paleonutrition research, discusses

methodological issues in the reconstruction of prehistoric diets, presents theoretical frameworks frequently used in paleonutrition research, and showcases examples in which paleonutritional analyses have been successfully conducted on prehistoric individuals, groups, and populations. It offers an integrative approach to understanding state-of-the-art anthropological dietary, health, and nutritional assessments. The most recent and innovative methods used to reconstruct prehistoric diets are discussed, along with the major ways in which paleonutrition data are recovered, analyzed, and interpreted. Paleonutrition includes five contemporary case studies that provide useful models of how to conduct paleonutrition research. Topics range from ancient diets in medieval Nubia to children's health in the prehistoric American Southwest to honey use by an ethnographic group of East African foragers. As well as providing interesting examples of applying paleonutrition techniques, these case studies illustrate the mutually beneficial linkages between ethnography and archaeology.
