Latest Advancements in Underground Structures and Geological Engineering Adam Bezvijen, Walter Wittke, Harry Poulos, Hany Shehata, 2019-11-01 This book includes the best-selected papers on the latest advancements in underground structures and geological engineering. The ongoing population growth is resulting in rapid urbanization, new infrastructure development, and increasing demand for the Earth's natural resources (e.g., water, oil/gas, minerals). This, together with the current climate change and increasing impact of natural hazards, implies that the engineering geology profession is called upon to respond to new challenges. It is recognized that these challenges are particularly relevant in the developing and newly industrialized regions.

Cricket: A Political History of the Global Game, 1945-2017 Stephen Wagg, 2017-11-14 Cricket is an enduring paradox. On the one hand, it symbolises much that is outmoded: imperialism; a leisured elite; a rural, aristocratic Englishness. On the other, it endures as a global game and does so by skilful adaptation, trading partly on its mythic past and partly on its capacity to repackage itself. This ambitious new history recounts the politics of cricket around the world since the Second World War, examining key cultural and political themes, including decolonisation, racism, gender, globalisation, corruption and commercialisation. Part One looks at the transformation of cricket cultures in the ten territories of the former British Empire in the years immediately after 1945, a time when decolonisation and the search for national identity touched every cricket playing region in the world. Part Two focuses on globalisation and the game's evolution as an international sport, analysing: social change and the Ashes; the campaigns for new cricket formats; the development of the women's game; the new breed of coach; the limits to the game's global expansion; and the rise of India as the world's leading cricket power. *Cricket: A Political History of the Global Game, 1945-2017* is fascinating reading for anybody interested in the contemporary history of sport.

Advances in Spectroscopy: Molecules to Materials Dheeraj Kumar Singh, Sourav Das, Arnulf Materny, 2019-10-24 This book presents and discusses recent developments in the broad field of spectroscopy, providing the reader with an updated overview. The main objective is to introduce them to recent innovations and current trends in spectroscopy applied to molecules and materials. The book also brings together experimentalists and theoreticians to highlight the multidimensional aspects of spectroscopy and discuss the latest issues. Accordingly, it provides insights not only into the general goals of spectroscopy, but also into how the various spectroscopic techniques represent a toolbox that can be used to gain a more detailed understanding of molecular systems and complex chemical problems. Besides technical aspects, basic theoretical interpretations of spectroscopic results are also presented. The spectroscopy techniques discussed include UV-visible absorption spectroscopy, Raman spectroscopy, IR absorption spectroscopy, fluorescence spectroscopy, and time-resolved spectroscopy. In turn, basic tools like lasers and theoretical modeling approaches are also presented. Lastly, applications for the characterization of fundamental properties of molecules (environmental aspects, biomolecules, pharmaceutical drugs, hazardous molecules, etc.) and materials (nanomaterials, nuclear chemistry materials, biomaterials, etc.) are discussed. Given its scope, the book offers a valuable resource for researchers from various branches of science, and presents new techniques that can be applied to their specific problems.

Global Health Kathryn Roberts, 2019-12-15 The impact of globalization on world health has been extremely positive. However, the increased connectivity enabled by globalization also makes the health and well being of citizens around the world more important than ever. Global pandemics, natural disasters, air pollution, medical care access, healthy food chains, immunization education and

availability, and economic disparity all factor into creating a healthy population. Why is global health so important, and what stands in the way of achieving it? Through viewpoints written by experts in the field, this volume highlights important issues in global health around the world.

Having All the Right Connections Peter Korsching, Patricia C. Hipple, Eric A. Abbott, 2000-07-30 Essays, based on five years of survey research in Iowa and case study examples from across the United States, examine the implications of telecommunications technologies for rural community development. Supported by data from five years of survey and case study research, telecommunications adoption and use is explored in nine sectors of the rural community to determine the influence these organizations and institutions have on telecommunications development within the broader rural community. These sectors include local government, economic development, business, newspapers, library services, health care, university extension to communities, and farming. Also considered are the factors that promote and retard telecommunications development, particularly the impact of telecommunications policy, the availability of state-of-the-art infrastructure and service, and the involvement of telephone companies in local community development. Using a community development framework, this work discusses the physical, financial, human and social capitals necessary for holistic community development and the significance of critical mass, the roles of internal and external networks, as well as vertical and horizontal linkages, and the importance of visionary leadership and the championing of telecommunications. Social Science and telecommunications scholars will appreciate the interdisciplinary approach these case studies represent. In addition, this research is intended to assist local leaders, community service providers, businesses, community officials, and state policy makers in capturing the potential benefits of innovative telecommunications technologies for local economic development, while avoiding potential problems and pitfalls. Essays are organized in three sections. The first presents theory, policy, and issues within a community development framework. The second discusses perspectives and actions of community sectors in their adoption and use of telecommunications. The third examines what occurs within an organization as it implements a new telecommunications system. Charts and graphs enhance the text and a glossary of terms is provided.

Conflict and Governance Amihai Glazer, Kai A. Konrad, 2013-06-29 Conflict appears in many forms, from a dictator terrorizing his country to organized crime demanding protection money. Questions and issues addressed in this text include: the conditions which make conflict severe; whether voluntary agreements can avoid future conflict; how the outcome of one war will affect the incentives of countries to wage war in the future; and how dictators hold power. The book provides an overview of existing literature, applies the

theory of conflict to new situations, and gives foundations for future work. It should interest both researchers and students studying political economy, public choice, international relations, and comparative politics.

Globalization and Intellectual Property Alexandra George, 2017-05-15 Intellectual property laws have become intricately entwined with discussions about globalization. This volume deals with the politics, economics and effects of global intellectual propertization. It provides essays covering key issues including the international relations of global intellectual propertization, the TRIPS Agreement and the tying of intellectual property issues to international trade negotiations, contentions that global intellectual propertization is a form of post-colonial neo-imperialism, globalization's effects on intellectual property law's classic doctrines and rationales and the cultural effects of global intellectual propertization.

Cognitive Economics Paul Bourguine, Jean-Pierre Nadal, 2013-03-20 The social sciences study knowing subjects and their interactions. A cognitive turn, based on cognitive science, has the potential to enrich these sciences considerably. Cognitive economics belongs within this movement of the social sciences. It aims to take into account the cognitive processes of individuals in economic theory, both on the level of the agent and on the level of their dynamic interactions and the resulting collective phenomena. This is an ambitious research programme that aims to link two levels of complexity: the level of cognitive phenomena as studied and tested by cognitive science, and the level of collective phenomena produced by the economic interactions between agents. Such an objective requires cooperation, not only between economists and cognitive scientists but also with mathematicians, physicists and computer scientists, in order to renew, study and simulate models of dynamical systems involving economic agents and their cognitive mechanisms. The hard core of classical economics is the General Equilibrium Theory, based on the optimising rationality of the agent and on static concepts of equilibrium, following a point of view systemised in the framework of Game Theory. The agent is considered rational if everything takes place as if he was maximising a function representing his preferences, his utility function.
