Data Preprocessing, Active Learning, and Cost Perceptive Approaches for Resolving Data Imbalance Rana, Dipti P.,Mehta, Rupa G.,2021-06-04 Over the last two decades, researchers are looking at imbalanced data learning as a prominent research area. Many critical real-world application areas like finance, health, network, news, online advertisement, social network media, and weather have imbalanced data, which emphasizes the research necessity for real-time implications of precise fraud/default detection, rare disease/reaction prediction, network intrusion detection, fake news detection, fraud advertisement detection, cyber bullying identification, disaster events prediction, and more. Machine learning algorithms are based on the heuristic of equally-distributed balanced data and provide the biased result towards the majority data class, which is not acceptable considering imbalanced data is omnipresent in real-life scenarios and is forcing us to learn from imbalanced data for foolproof application design. Imbalanced data is multifaceted and demands a new perception using the novelty at sampling approach of data preprocessing, an active learning approach, and a cost perceptive approach to resolve data imbalance. Data Preprocessing, Active Learning, and Cost Perceptive Approaches for Resolving Data Imbalance offers new aspects for imbalanced data learning by providing the advancements of the traditional methods, with respect to big data, through case studies and research from experts in academia, engineering, and industry. The chapters provide theoretical frameworks and the latest empirical research findings that help to improve the understanding of the impact of imbalanced data and its resolving techniques based on data preprocessing, active learning, and cost perceptive approaches. This book is ideal for data scientists, data analysts, engineers, practitioners, researchers, academicians, and students looking for more information on imbalanced data characteristics and solutions using varied approaches.

Never Look Back John Misak,2023-12-15 The Sixth Book in the Acclaimed John Keegan Mystery Series! Homicide Detective John Keegan has risen in the ranks. Can he balance command and detective duties while hunting the killer of a seemingly benevolent philanthropist? Tech guru Keith Canton is found dead in his apartment, the killer using an old-style murder weapon: piano wire. It's a method NYPD Homicide Detective John Keegan has seen before. Canton had no clear enemies yet investigation into his life reveals three avenues to a suspect. The first is an online game called Deathtrip Dungeon. Players have altered the game to include a powerful hallucinogenic drug called DMT. Players now engage in offline versions of the game while experiencing hallucinations that mimic the game environment. Players may have died because of it. Could Canton, whose project list and known associates connect to the game, have become one of its victims? Second, Canton last did work for Colby Fitzpatrick, a popular pollster who has never revealed his political leanings. He is highly sought by politicians in hotly contested Senate and mayoral races. Politics are a dirty game and Canton may have gotten caught in the crossfire. Lastly, Canton mentored and heavily promoted the founders of a company called Rush VR. Rush has made a breakthrough in recreating memories. Keegan demos their work, experiences a life-like visit to the past, and discovers a strong connection between the project and Deathtrip Dungeon. Perhaps Canton's death came from an involvement with the city's underbelly of drugs and crime. Others turn up dead during the investigation and Keegan, his partner Karl Lavin, and his wife, Pauline, must drain every resource to solve Canton's murder and save the city from an impending mass killer.

Spooky Technology: A reflection on the invisible and otherworldly qualities in everyday technologies Daragh Byrne,Dan Lockton,Matthew Cruz,Christi Danner,Karen Escarcha,Katherine Giesa,Meijie Hu,Yiwei Huang,Miranda Luong,Anuprita Ranade,Gordon Robertson,Elizabeth Wang,Lisa (Yip Yan) Yeung,Catherine Yochum,2021-08-31 Spooky Technology explores our understanding of the invisible technologies in our everyday lives, from objects with ‘intelligence’ to systems in our homes that talk to us (and each other). The book is an inventory of spooky technologies, compiled by Carnegie Mellon students reviewing work across art, design, HCI, psychology, human factors research, and other fields, that has been done in this field, or adjacent to it, both historically and more recently, with commentary, essays, and interviews with creators and artists. We often hear that the technologies in our everyday lives would appear to be ‘magic’ and potentially terrifying to people in the past—instantaneous communication with people all over the world, access to a vast, ever-growing resource of human knowledge right there in the palm of our hand, objects with ‘intelligence’ that can sense and talk to us (and each other). But rarely are these ‘otherworldly’ dimensions of technologies explored in more detail. There is an often unspoken presumption that the march of progress will inevitably mean we all adopt new practices, and incorporate new products and new ways of doing things into our lives—all cities will become smart cities; all homes will become smart homes. But these systems have become omnipresent without our necessarily understanding them. They are not just black boxes, but invisible: entities in our homes and everyday lives which work through hidden flows of data, unknown agendas, imaginary clouds, mysterious sets of rules which we perhaps dismiss as ‘algorithms’ or even ‘AI’ without really understanding what that means. On some level, the superstitions and sense of wonder, and ways of relating to the unknown and the supernatural (deities, spirits, ghosts) which humanity has felt in every culture throughout history have not gone away, but started to become transferred and transmuted into new forms.

Rembrandt and His Critics 1630-1730 Seymour Slive,2013-03-09 My greatest debt in the writing of this book is to my teacher Dr. Ulrich Middeldorf, who taught me the methodology of research in art history, and who guided my studies of art theory and criticism. This study, which in an earlier form was accepted as a doctoral dissertation by the University of Chicago, was begun under Dr. Middeldorf's guidance, and during all stages of its preparation I benefited from his invaluable suggestions and criticism. A United States Government Grant enabled me to complete my researches on Rembrandt in the Netherlands, where I studied at the Rijksuniversiteit te Utrecht with Dr. J.G. van Gelder, who was particularly generous with his knowledge and time. He read the manuscript and proofs, and offered numerous suggestions and additions which have been of great benefit to me. Special acknowledgement is made to the Kunsthistorisch Instituut der Rijksuniversiteit te Utrecht for generously finding a place for this study in the Utrechtse Bij dragen tot de Kunstgeschiedenis. I am also much indebted to Dr. H. Schulte Nordholt of the Kunsthistorisch Instituut for his valuable advice and his help in seeing the book through the press.
