SQL Server Backup and Restore Shawn McGehee, 2012

A database administrator's duties include ensuring that a database can be restored and recovered in the event of error or disaster. This book discusses how to perform backup and restore operations using SQL Server Management Studio (SSMS), basic T-SQL scripts and Red Gate's SQL Backup tool. Capturing backups using SSMS or simple scripts is fine for one-off backup operations, but any backups that form part of the recovery strategy for any given database must be automated with some built-in checks that, for example, alert the responsible database administrator immediately if a problem arises. The tool of choice in this book for backup automation is Red Gate SQL Backup. Building an automated solution will take a lot of work, but this book offers some advice on possible options, such as PowerShell scripting, T-SQL scripts and SQL Server Agent jobs. --

Implementing Database Security and Auditing Ron Ben Natan, 2005-05-20 This book is about database security and auditing. You will learn many methods and techniques that will be helpful in securing, monitoring and auditing database environments. It covers diverse topics that include all aspects of database security and auditing - including network security for databases, authentication and authorization issues, links and replication, database Trojans, etc. You will also learn of vulnerabilities and attacks that exist within various database environments or that have been used to attack databases (and that have since been fixed). These will often be explained to an "internals level. There are many sections which outline the "anatomy of an attack – before delving into the details of how to combat such an attack. Equally important, you will learn about the database auditing landscape – both from a business and regulatory requirements perspective as well as from a technical implementation perspective. * Useful to the database administrator and/or security administrator - regardless of the precise database vendor (or vendors) that you are using within your organization. * Has a large number of examples - examples that pertain to Oracle, SQL Server, DB2, Sybase and even MySQL.. * Many of the techniques you will see in this book will never be described in a manual or a book that is devoted to a certain database product. * Addressing complex issues must take into account more than just the

database and focusing on capabilities that are provided only by the database vendor is not always enough. This book offers a broader view of the database environment - which is not dependent on the database platform - a view that is important to ensure good database security.

Landscape Interfaces Hannes Palang, G.

Fry, 2013-06-29 This book has been initiated by the workshop on Cultural heritage in changing landscapes, held during the IALE (International Association for Landscape Ecology) European Conference that started in Stockholm, Sweden, in June 2001 and continued across the Baltic to Tartu, Estonia, in July. The papers presented at the workshop have been supported by invited contributions that address a wider range of the cultural heritage management issues and research interfaces required to study cultural landscapes. The book focuses on landscape interfaces. Both the ones we find out there in the landscape and the ones we face while doing research. We hope that this book helps if not to make use of these interfaces, then at least to map them and bridge some of the gaps between them. The editors wish to thank those people helping us to assemble this collection. First of all our gratitude goes to the authors who contributed to the book. We would like to thank Marc Antrop, Mats Widgren, Roland Gustavsson, Marion Potschin, Barbel Tress, Tiina Peil, Helen Soovali and Anu Printsman for their quick and helpful advice, opinions and comments during the different stages of editing. Helen Soovali and Anu Printsman together with Piret Pungas - thank you for technical help.

Discovering the Character of God George MacDonald, 2018-10-28 Devotional selections from the poetry, sermons, and fiction of the great Victorian author George MacDonald. One of the nineteenth-century's greatest thinkers, George MacDonald has inspired generations with his powerful stories and sermons. Now his words of wisdom are available in a series of devotionals compiled and edited by the MacDonald scholar and author of *George MacDonald: Scotland's Beloved Storyteller*. *Discovering the Character of God* presents brief, daily readings from MacDonald's poetry, sermons, and fiction. Each offers deep insight into God's loving character and the harmony that exists between his mercy and his justice. MacDonald's imaginative perception of God's presence and handiwork in every facet of life lead the reader on an enriching path of discovery.

Oracle Privacy Security Auditing Arup Nanda, Donald K. Burleson, 2003 Sharing secrets for the effective creation of auditing mechanisms for Health/Insurance Portability and Accountability Act of 1996 (HIPAA) compliant Oracle systems, this book demonstrates how the HIPAA framework provides complete security access and auditing for Oracle database information. Complete details for using Oracle auditing features, including auditing from Oracle redo logs, using system-level triggers, and using Oracle9i fine-grained auditing (FGA) for auditing of the retrieval of sensitive information, are provided. Examples from all areas of auditing are covered and include working scripts and code snippets. Also discussed are the

use of the Oracle9i LogMiner to retrieve audits of database updates and how to implement all Oracle system-level triggers for auditing, including DDL triggers, server error triggers, and login and logoff triggers.

Oracle SQL Gavin JT Powell, Carol McCullough-Dieter, 2004-10-15 Developers and DBAs use Oracle SQL coding on a daily basis, whether for application development, finding problems, fine-tuning solutions to those problems, or other critical DBA tasks. Oracle SQL: Jumpstart with Examples is the fastest way to get started and to quickly locate answers to common (and uncommon) questions. It includes all the basic queries: filtering, sorting, operators, conditionals, pseudocolumns, single row functions, joins, grouping and summarizing, grouping functions, subqueries, composite queries, hierarchies, flashback queries, parallel queries, expressions and regular expressions, DML, datatypes (including collections), XML in Oracle, DDL for basic database objects such as tables, views and indexes, Oracle Partitioning, security, and finally PL/SQL. * Each of the hundreds of SQL code examples was tested on a working Oracle 10g database * Invaluable everyday tool that provides an absolute plethora of properly tested examples of Oracle SQL code * Authors have four decades of commercial experience between them as developers and database administrators

Voices Cast Out to Talk Us In Ed Roberson,1995-05 There is no one else like Ed Roberson—certainly there is no other poet like him. His is an oblique, eccentric, totally fascinating talent. Because of these qualities, it may seem that he is difficult to follow—as Ornette Coleman or Gabriel García Márquez or Romare

Beardon seems difficult to track at times. But his strength of vision is always evident; the quickness and inclusiveness of his voice can sweep a reader along into new and refreshing areas. Roberson's poetic moves are not tricks or affected traits. They are artistic and deeply considered techniques. Reading the two basic cycles of this elliptical and intriguing work could be likened to reading Ezra Pound or a more deliberate and lyrically touched Charles Olson, but with an unanchored allusiveness of things largely American taking the place of the Chinese and the Mayan. Roberson creates that rare combination of sophistication and simplicity which defines truly significant poetry. In this new work he makes the variety of our culture dance from his very special viewpoint.

Discrepant Engagement Nathaniel

Mackey, 1993-09-24 *Discrepant Engagement* addresses work by black writers from the United States and the Caribbean and the so-called Black Mountain poets.

Germany's Transient Pasts Rudy J.

Koshar, 2000-11-09 Over the course of the twentieth century, Germans have venerated and maintained a variety of historical buildings--from medieval fortresses and cathedrals to urban districts and nineteenth-century working-class housing. But the practice of historic preservation has sometimes proven controversial, as different groups of Germans have sought to use historical architecture to represent competing versions of their nation's history. *Transient Pasts* is the first book to examine the role that the historic preservation movement has played in German cultural history and memory from the end of the nineteenth century to the early 1970s. Focusing on key public debates over historic preservation, Rudy Koshar charts a trajectory of cultural politics in which historical architecture both facilitated and limited Germans' efforts to identify as a nation.

He demonstrates that historical buildings and monuments have served as enduring symbols of national history in a country scarred by the traumas of two world wars, Nazism, the Holocaust, and political division. His findings challenge both the widely accepted argument that Germans have constantly repressed their past and the contention that Germany's intense public engagement with history since reunification is unprecedented.

Paracritical Hinge Nathaniel Mackey, 2018-03-15
Paracritical Hinge is a collection of varied yet interrelated pieces highlighting Nathaniel Mackey's multifaceted work as writer and critic. It embraces topics ranging from Walt Whitman's interest in phrenology to the marginalization of African American experimental writing; from Kamau Brathwaite's "calibanistic" language practices to Federico García Lorca's flamenco aesthetic of duende and its continuing repercussions; from H. D.'s desert measure and coastal way of knowing to the altered spatial disposition of Miles Davis's trumpet sound; from Robert Duncan's serial poetics to diasporic syncretism; from the lyric poem's present-day predicaments to gnosticism. Offering illuminating commentary on these and other artists including Amiri Baraka, Mississippi Fred McDowell, Wilson Harris, Jack Spicer, John Coltrane, Jay Wright, and Bob Kaufman, Paracritical Hinge also sheds light on Mackey's own work as a poet, fiction writer, and editor.

and dumber than ever! Everybody's favorite computer book author takes an intimidating and boring subject like DOS and shows you that it's okay to laugh as you learn. With over 500,000 in print, the original edition has sold and sold and sold--over nine months atop the bestseller lists in the U.S., U.K., Canada, and Australia.

Oracle High Performance Tuning for 9i and 10g

Gavin JT Powell, 2003-12-29 There are three parts to tuning an Oracle database: data modeling, SQL code tuning and physical database configuration. A data model contains tables and relationships between tables. Tuning a data model involves normalization and de-normalization. Different approaches are required depending on the application, such as OLTP or a Data Warehouse. Inappropriate database design can make SQL code impossible to tune. Poor data modeling can have a most profound effect on database performance since all SQL code is constructed from the data model. Poorly written SQL code is often a culprit of performance problems and is expensive to rectify. However, tuning of SQL code is generally cheaper than changing the data model. SQL code tends to be contained inside independent blocks within applications or stored procedures. Physical database tuning involves hardware resource usage, networking and various other Oracle things such as configuration and file distribution. Physical configuration is often a culprit of poor performance where Oracle is installed with defaults, and never altered by an expert.

*Includes all three aspects of Oracle database tuning: data model tuning, SQL & PL/SQL code

tuning, physical plus configuration tuning
*Contains experienced guidance and real-world
examples using large datasets *Emphasizes
development as opposed to operating system
