Tankograd L. Samuelson,2011-07-26 A major production site of Soviet KV and T-34 tanks in WWII, the town of Cheliabinsk in the Urals was nicknamed 'Tankograd', its civilian machine-building factories swiftly converted to arms production. This book gives a social, economic and political panorama that describes everyday life in a typical Soviet company town during the Stalin era.

The Military Uses of Literature Mark T. Hooker,1996-05-14 This book studies the made-to-order genre of socialist-realist fiction that was produced at the direction of the Main Political Directorate of the Soviet Army and Navy (MPD) as a part of the war for men's minds waged by the Soviet State. The first chapter is a history of the genre, tracing it from its roots in the Revolution to the dissolution of the MDP in 1991. Topics examined in the book include the attitude toward Germans following World War II; the retirement of the World War II generation; military wives; Dear John letters; life at remote posts; the military as a socializing institution; the use of lethal force by sentries; attitudes toward field training exercises, heroism, and initiative; legitimacy of command; and the reception of Afghan vets.

Arkhel Conundrum Sarah Ash,2019-10-26 e;But what happened to Gavril and Kiukiu after Children of the Serpent Gate? When is the sequel coming out?e; Readers have been asking me this question ever since Book 3 of The Tears of Artamon was published - and at last I've had the chance to provide an answer in Book 4: The Arkhel Conundrum. Azhkendir, land of snow and shadows, harbours many secrets - and a powerful ancient winter deity is awakened when a foreign mining company begins to strip out the rare mineral resources beneath the mountains. Old clan hatreds are stirred up. The High Steward of Azhkendir, Lord Gavril, and his wife, Spirit Singer Kiukiu, hope to seek help from the Emperor Eugene. But their onetime enemy turned ally is distracted by his competition to build a flying machine. Is someone from their past trying to destabilize the fragile peace of the empire? Or are there supernatural forces involved? The Magus, Kaspar Linnaeus, may have the answers...but he has disappeared and no one knows where he is or how to contact him.

New Frontiers in Catalysis, Parts A-C L. Guzzi,F. Solymosi,P. Tétényi,1993-04-20 These volumes comprise the proceedings of the major international meeting on catalysis which is held at 4 year intervals. The programme focussed on New Frontiers in Catalysis including nontraditional catalytic materials and environmental catalysis. The contributions cover a wide range of fundamental, applied, industrial and engineering aspects of catalysis. The extensive range of highly efficient industrial techniques for observing and characterizing catalytically important surfaces is evident. The programme covered the following sessions: Mechanism, theory, in situ methods; Catalytic reaction on atomically clean surfaces; Catalytic reaction on zeolites and related substances; New methods and principles for catalyst preparation; Hydrotreatment reactions (HDS, HDN); Characterization of catalysts, application of novel techniques; Selective oxidation; New catalytic aspects of heteropoly acids and related compounds; Reaction of hydrocarbons; Nontraditional catalytic materials; Fuel upgrading; Alkane activation; Acid-base catalysis; New selective catalytic reactions, fine chemicals; Environmental catalysis; Industrial catalysis, deactivation, reactivation; Synthesis from syngas; Electrocatalysis; Photocatalysis. The invited lectures and 433 papers included in these volumes present an update on all areas of catalysis and applications.

Homogeneous and Heterogeneous Catalysis ,1986-06 This Proceedings contains plenary lectures and selected poster communications spanning the entire field of catalysis --- from catalysis by protons to catalysis by multinuclear clusters and ultra-disperse particles. It includes discussion of the recent results of fundamental research conducted at the juncture between homogeneous and heterogeneous catalysis. New ideas, based on modern physical and quantum-chemical methods, and concerning the mechanism of formation and functioning of active sites of catalysts are suggested. It is shown how the cyclic change of atomic distribution in the active site occurs during catalytic transformations. In addition, the Proceedings report new data on methods of ''assembling'' molecularly organized catalytic systems and on the mechanisms of their action. The various problems such as the effect of strong metal--support interaction, migration of atoms in active sites, and design of catalytic properties of substances are also widely discussed. Similarities and differences in mechanisms of action of homogeneous and heterogeneous catalysts are considered, using as examples CO hydrogenation, hydrogenolysis of saturated hydrocarbons, selective hydrogenation and oxidation of olefins, metathesis and polymerization of olefins, hydrosilylation and hydroformylation of olefins, etc.

Catalytic Polymerization of Olefins T. Keii,K. Soga,1986-04-01 This book covers the proceedings of a symposium which was attended by researchers from all over the world who reported on and discussed recent advances in the field of catalytic polymerization of olefins. Over two decades have elapsed since the discovery of the Ziegler-Natta catalyst. Tremendous research effort has been aimed at improving this marvelous catalyst. In twenty-five years since the first publication, more than 15,000 papers and patents on the subject and on related subjects have appeared. This effort has yielded new generations of Ziegler-Natta catalysts with superior activity and stereospecificity. The complexities arising from the heterogeneity of the catalyst, however, have hindered understanding of the catalytic processes which take place on the catalyst surface. Nevertheless, many fundamental features of the catalyst system have now been clarified reasonably well. Recently a highly active homogeneous catalytic system has been developed, which is capable of catalyzing even isotactic polymerization of propene. There is no doubt that this finding will not only contribute to our understanding of the detailed mechanism of polymerization but also stimulate the development of various kinds of tailored polymers. Thus this subject will remain of paramount importance in the development of chemistry and polymer science for a long time to come.

Introduction to Polarization Physics Sandibek B. Nurushev,Mikhail F. Runtso,Mikhail N. Strikhanov,2012-10-28 This book is devoted to the polarization (spin) physics of high energy particles and contains three parts. The first part presents the theoretical prefaces of polarization in the particle physics for interpretations, predictions and bases for understanding the following two parts. The second part of the book presents the description of the essential polarization experiments including the recent ones. This part is devoted to the innovative instrumentations, gives the parameters of the polarized beams, targets, polarized gas jets and polarimeters. The third part of the book concentrates on the important achievements in polarization physics. The book can be used in lectures on nuclear and particle

physics and and nuclear instruments and methods. As supplementary reading this book is useful for researchers working in particle and nuclear physics.

Moscow Politics and The Rise of Stalin Catherine Merridale,1990-10-19 Focusing on the development of the Communist Party in Moscow between 1925 and 1932 and its ultimate assumption of absolute power. This volume examines in detail the political changes in Moscow, including the crisis over collectivization, and the organization strategy of the Party in Moscow.

Surface Organometallic Chemistry: Molecular Approaches to Surface Catalysis Jean-Marie Basset,Bruce C. Gates,Jean-Pierre Candy,Agnès Choplin,Michel Leconte,Françoise Quignard,Cathérine Santini,2012-12-06 Surface organometallic chemistry is a new field bringing together researchers from organometallic, inorganic, and surface chemistry and catalysis. Topics ranging from reaction mechanisms to catalyst preparation are considered from a molecular basis, according to which the active site on a catalyst surface has a supra-molecular character. This. the first book on the subject, is the outcome of a NATO Workshop held in Le Rouret. France, in May. 1986. It is our hope that the following chapters and the concluding summary of recommendations for research may help to provide a definition of surface organometallic chemistry. Besides catalysis. the central theme of the Workshop, four main topics are considered: 1) Reactions of organometallics with surfaces of metal oxides, metals. and zeolites; 2) Molecular models of surfaces, metal oxides, and metals; 3) Molecular approaches to the mechanisms of surface reactions; 4) Synthesis and modification of zeolites and related microporous solids. Most surface organometallic chemistry has been carried out on amorphous high-surf ace-area metal oxides such as silica. alumina. magnesia, and titania. The first chapter. contributed by KNOZINGER. gives a short summary of the structure and reactivity of metal oxide surfaces. Most of our understanding of these surfaces is based on acid base and redox chemistry; this chemistry has developed from X-ray and spectroscopic data, and much has been inferred from the structures and reactivities of adsorbed organic probe molecules. There are major opportunities for extending this understanding by use of well-defined (single crystal) oxide surfaces and organometallic probe molecules.

Magnetic Mountain Stephen Kotkin,1997-02-27 This study is the first of its kind: a street-level inside account of what Stalinism meant to the masses of ordinary people who lived it. Stephen Kotkin was the first American in 45 years to be allowed into Magnitogorsk, a city built in response to Stalin's decision to transform the predominantly agricultural nation into a country of metal. With unique access to previously untapped archives and interviews, Kotkin forges a vivid and compelling account of the impact of industrialization on a single urban community. Kotkin argues that Stalinism offered itself as an opportunity for enlightenment. The utopia it proffered, socialism, would be a new civilization based on the repudiation of capitalism. The extent to which the citizenry participated in this scheme and the relationship of the state's ambitions to the dreams of ordinary people form the substance of this fascinating story. Kotkin tells it deftly, with a remarkable understanding of the social and political system, as well as a keen instinct for the details of everyday life. Kotkin depicts a whole range of life: from the blast furnace workers who labored in the enormous iron and steel plant, to the families who struggled with the shortage of housing and services. Thematically organized and closely focused, Magnetic Mountain signals the beginning of a new stage in the writing of Soviet social history.

Catalytic Hydrogenation L. Cervený,1986-08-01 The collection of contributions in this volume presents the most up-to-date findings in catalytic hydrogenation. The individual chapters have been written by 36 top specialists each of whom has achieved a remarkable depth of coverage when dealing with his particular topic. In addition to detailed treatment of the most recent problems connected with catalytic hydrogenations, the book also contains a number of previously unpublished results obtained either by the authors themselves or within the organizations to which they are affiliated. Because of its topical and original character, the book provides a wealth of information which will be invaluable not only to researchers and technicians dealing with hydrogenation, but also to all those concerned with homogeneous and heterogeneous catalysis, organic technology, petrochemistry and chemical engineering.
