Always On Brian Chen, X Chen, 2012-09-25 Even Steve Jobs didn't know what he had on his hands when he announced the original iPhone as a combination of a mere three revolutionary products--an iPod, a cell phone, and a keyboard-less handheld computer. Once Apple introduced the App Store and opened it up to outside developers, however, the iPhone became capable of serving a rapidly growing number of functions--now more than 200,000 and counting. But the iPhone has implications far beyond the phone or gadget market. In fact, it's opening the way to what Brian Chen calls the always-on future, where we are all constantly connected to a global Internet via flexible, incredibly capable gadgets that allow us to do anything, anytime, from anywhere. This has far-reaching implications--both positive and negative--throughout all areas of our lives, opening the door for incredible personal and societal advances while potentially sacrificing both privacy and creative freedom in the process. Always On is the first book to look at the surprising and expansive significance of Apple's incredibly powerful vertical business model, and the future it portends.

Managing Trust in Cyberspace Sabu M. Thampi, Bharat Bhargava, Pradeep K. Atrey, 2013-12-14 In distributed, open systems like cyberspace, where the behavior of autonomous agents is uncertain and can affect other agents' welfare, trust management is used to allow agents to determine what to expect about the behavior of other agents. The role of trust management is to maximize trust between the parties and thereby provide a basis for cooperation to develop. Bringing together expertise from technology-oriented sciences, law, philosophy, and social sciences, Managing Trust in Cyberspace addresses fundamental issues underpinning computational trust models and covers trust management processes for dynamic open systems and applications in a tutorial style that aids in understanding. Topics include trust in autonomic and self-organized networks, cloud computing, embedded computing, multi-agent systems, digital rights management, security and quality issues in trusting e-government service delivery, and context-aware e-commerce applications. The book also presents a walk-through of online identity management and examines using trust and argumentation in recommender systems. It concludes with a comprehensive survey of anti-forensics for network security and a review of password security and protection. Researchers and practitioners in fields such as distributed computing, Internet technologies, networked systems, information systems, human computer interaction, human behavior modeling, and intelligent informatics especially benefit from a discussion of future trust management research directions including pervasive and ubiquitous computing, wireless ad-hoc and sensor networks, cloud computing, social networks, e-services, P2P networks, near-field communications (NFC), electronic knowledge management, and nano-communication networks.

Go Green at Home Frank Y. Panol Ph. D., 2011-10 The central idea of this book is that saving energy and water saves the households money and simultaneously help reduce greenhouse gas emissions that cause global warming. It also aims to give readers better understanding of the green concept to enable informed participation in the current discourse pertaining to environment and climate change. The first chapter reviews environmental issues confronting the world in general and the U.S. in particular. Chapter 2 discusses federal energy efficiency programs that relate directly with energy saving and resource conservation efforts in households. Chapter 3 focuses on measures of saving energy at home including use of compact fluorescent lamps, taking advantage of residual heat in electric stoves, energy-efficient ways of using kitchen appliances, informed choice and use of home heating and cooling systems and others. Chapter 4 deals with conserving water inside and outside homes including use of high-efficiency toilets, low -low shower heads, etc. The economics of energy and water use efficiency, covered in Chapter 5, quantifies the savings derived from most of the measures

discussed in Chapters 3 and 4. The goal is to show in dollar terms how much households could save by following green practices at home. The challenges of dealing with solid waste from households are examined in Chapter 6. Particular focus is given on Pay-As-You-Throw (PAYT) scheme in waste collection systems and fees as well as the three Rs in waste management - Reduce, Reuse and Recycle. Recognizing the impact of children on energy and water use at home, the author devotes Chapter 7 on educating and engaging children in green practices. Two framework proposals aimed at enhancing sustainability of green movement in the country are presented in Chapter 8 including establishment of green camps and providing tax incentives for going green at home. Proposal for establishing green camps is directed to private business sector or non-profit organizations and the government while the tax incentive proposal is directed solely to the government.
