**Astrophysical Magnetic Fields** Anvar Shukurov, Kandaswamy Subramanian, 2021-12-16 Magnetic fields permeate space and affect many major astrophysical phenomena, but they are often ignored due to their perceived complexity. This self-contained introduction to astrophysical magnetic fields provides both a comprehensive review of the current state of the subject and a critical discussion of the latest research. It presents our knowledge of magnetic fields from the Early Universe, their evolution in cosmic time through to their roles in present-day galaxies, galaxy clusters and the wider intergalactic medium, with attention given to both theory and observations. This volume also contains an extensive introduction into magnetohydrodynamics, numerous worked examples, observational and mathematical techniques and interpretations of the observations. Its review of our current knowledge, with an emphasis on results that are likely to form the basis for future progress, benefits a broad audience of advanced students and active researchers, including those from fields such as cosmology and general relativity.

*Handbook of X-ray and Gamma-ray Astrophysics* Cosimo Bambi,

The Viceroys Federico de Roberto, 2016-01-19 A lost literary classic, written in 1894, *The Viceroy*s is one of the most acclaimed masterworks of Italian realism. The novel follows three generations of the aristocratic Uzeda family as it struggles to hold on to power in the face of the cataclysmic changes rocking Sicily. As Garibaldi's triumphs move Italy toward unification, the Uzedas try every means to retain their position. De Roberto's satirical and mordant pen depicts a cast of upper-class schemers, headed by the old matriarch, Donna Teresa, and exemplified by her arrogant and totally unscrupulous son, Consalvo, who rises to political eminence through lip service, double-dealing, and hypocrisy. *The Viceroy*s is a vast dramatic panorama: a new world fighting to shrug off the viciousness and iniquities of the old.

*Low Frequency Radio Observations of Galaxy Clusters and Groups* Thérèse Cantwell, 2018-09-01 This book uses new data from the very low radio frequency telescope LOFAR to analyse the magnetic structure in the giant radio galaxy NGC6251. This analysis reveals that the magnetic field strength in the locality of this giant radio galaxy is an order of magnitude lower than in other comparable systems. Due to the observational limitations associated with capturing such huge astrophysical structures, giant radio galaxies are historically a poorly sampled population of objects; however, their preferential placement in the more rarefied regions of the cosmic web makes them a uniquely important probe of large-scale structures. In particular, the polarisation of the radio emissions from giant radio galaxies is one of the few tools available to us that can be used to measure magnetic fields in regions where the strength of those fields is a key differentiator for competing models of the origin of cosmic magnetism. Low frequency polarisation data are crucial for detailed analyses of magnetic structure, but they are also the most challenging type of observational data to work with. This book presents a beautifully coupled description of the technical and scientific analysis required to extract valuable information from such data and, as the new generation of low frequency radio telescopes reveals the larger population of giant radio galaxies, it offers a significant resource for future analyses.

Molyneux, 2011-07-26 This text comprises a selection of papers that provide state-of-the-art insights into research focusing on dimensions of bank strategy, governance and the role of credit rating agencies that were presented at the European Association of University Teachers of Banking and Finance Conference, September 2010.

Foundations of High-Yield Analysis Martin S. Fridson, 2018-08-27 Since the advent some 40 years ago of a vibrant primary market for speculative-grade corporate bonds, the high-yield market has evolved from a niche occupied by a small group of specialists into a full-fledged institutional investment category. Asset allocators and portfolio managers now have at their disposal the tools necessary for rigorous investment analysis, including financial statements of the issuers, indexes, trading prices, historical default rates, and time series on such credit factors as liquidity, ratings, and covenant quality. This research brief provides up-to-date techniques for extracting from the extensive data the information that can lead to sound investment decisions.
